Hiring Team, Newform

Agency-side performance marketing for consumer apps breaks at one specific seam: the gap between the creative refresh cadence and the channel diagnostics. Most teams have respectable ROAS in aggregate, a creative team shipping variants, and a platform specialist tweaking bids, and none of those three feedback loops are actually closed against each other. The agencies that win at \$100M-of-spend scale are the ones with a per-client operating cadence where creative-fatigue diagnostics drive the next test, not the dashboard's blended numbers.

I have run that operating cadence at Pixis. Eight-client B2B SaaS portfolio with per-client monthly media budgets ranging \$15K to \$90K, leading an 8-person team across creative, account management, and platform specialists. Weekly client QBRs presenting ROI, iROAS, and roadmap recommendations to CFOs and growth leads. Replaced two underperforming channels mid-quarter when KPIs slipped. Cut churn 50% via per-client renewal-aligned playbooks documented in writing. The shape of that book is the shape of Newform's account portfolio.

On the diagnostic side, I validated 3x ROAS lift for a fashion D2C partner via holdout incrementality testing and reconciled the lift against creative-variant diagnostics that aggregate ROAS would have hidden. Two enterprise clients on the portfolio looked fine in aggregate, but the top 5% of sessions were carrying the average. Refresh creative, re-key channel mix, both retained. That is the operating muscle Newform's media buyers and creative strategists need from a manager.

iOS app paid UA is on the CV. I ran it via Appsflyer and Adjust at Pixis as part of the same 8-client book, with SKAN / post-IDFA discipline on which conversion events to trust and which to discount. On Plug Power I rebuilt the multi-channel paid stack on Google Ads, Meta, LinkedIn, and Adobe-driven programmatic. UTM spec from scratch, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution. CPA dropped 25%, conversion went up 20%. Same mental model: deterministic where you can, probabilistic where you cannot, ruthless about which conversion event you actually trust.

On the AI-agent side, I am unusually well-aligned with WillBot. SwipeHire shipped on Python, OpenAI API, and React. Four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. At Pixis I trained eight enterprise marketers on AI bidding tools. The translation muscle from AI capability to client outcome is the same translation Newform sells.

NYC works. Open to relocating. Resume attached.
