Hiring Team, OpenAI

Performance marketing at OpenAI scale is going to be limited by one thing: how fast the team can iterate on creative, targeting, and insight. Channel strategy is the easy part. The bottleneck is the loop between hypothesis, test, and decision. AI-enabled workflows are how that loop shortens. That is the part of the work I want to do.

I have rebuilt that loop at Plug Power on a B2B paid stack. Google Ads, Meta, LinkedIn, and Adobe-driven programmatic display, all stitched into closed-loop attribution on Salesforce, Adobe Analytics, GA4, and GTM. UTM spec from scratch, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution. CPA dropped 25%, conversion went up 20%. The Adobe Audience Manager work paired with that: audience layers, retargeting funnels, suppression-list logic. The result was a paid stack where every test compounded.

At Pixis I ran an 8-client B2B SaaS portfolio on a \$1.4M media budget with weekly multi-channel optimization across Google, Meta, programmatic, and email. Validated a 3x ROAS lift for a fashion partner via holdout incrementality testing. Held vendors and clients to delivery and quality standards in writing; replaced two channels mid-quarter when KPIs slipped. Churn down 50%. Pixis is also where I trained eight enterprise marketers on AI bidding and creative tools, which is where my AI-enabled-workflow muscle comes from.

On the AI side specifically, I shipped SwipeHire end-to-end on Python, OpenAI API, and React. AI-enabled creative iteration, ICP definition, GA4 plus event tracking from day one, eight A/B tests, +25% activation, weekly retention cohort analysis. Plus four Claude certifications (101, Code 101, Cowork, Building with Claude API) for prompt-based iteration on creative, targeting, and insight workflows.

On consumer paid funnels, I delivered 16x ROAS at GenY for a D2C e-commerce brand by rebuilding Google Merchant Center and Meta catalog feeds, fixing schema, structured Shopping and Advantage+ campaigns. Technical rebuild, then growth.

On localization, my Sensata GTM ran across NA, EU, and three regions: \$2M+ first-year revenue, +35% qualified leads, with messaging and channel mix tuned per region.

SF or NYC are both workable. Happy to walk through any of the above in more detail.
