Hiring Team, Openmart

Selling into sales-ops and revenue leaders at companies that target SMBs is a tight buyer category most growth marketers have never worked. The buyer is technical-enough to evaluate the data quality you put in front of them and time-poor-enough to drop you the moment a single message lands as fluff. The teams that win sell on outcomes (closed-pipeline lift, cost per qualified lead) rather than features, and they ship faster than the buyer's incumbent (ZoomInfo, Apollo) can react. That is the part of the work I want to do at Openmart.

I have run B2B SaaS demand into the same buyer category at Pixis. Eight enterprise clients, \$1.4M media budget, all selling AI marketing capabilities into revenue-ops and sales-leader audiences. Validated a 3x ROAS lift for a fashion D2C partner via holdout incrementality testing and reconciled it against creative-variant diagnostics that aggregate ROAS would have hidden. Cut churn 50% through per-client renewal-aligned playbooks documented in writing. Trained eight enterprise marketers on AI bidding tools so they could explain the results to their CFOs.

On the demand-engine-from-scratch side, Plug Power is the case study. I came in as the early growth hire to a fragmented paid stack with no closed-loop attribution and rebuilt it. Paid search, paid social, programmatic display, email, MarTech rollout. UTM spec from scratch, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution. CPA dropped 25%, conversion went up 20%. The next growth hire inherited a system rather than a black box.

On the AI-native side, I am exactly the candidate Openmart's stack rewards. Shipped SwipeHire end-to-end on Python, OpenAI API, and React. ICP definition, instrumentation, eight A/B tests, weekly retention cohort. 50+ users, +25% activation. Plus four Anthropic Claude certifications from running prompt-based iteration on creative, copy, and insight as my actual workflow. The AI-fluent execution your JD implicitly assumes is how I already work.

One more thing on the buyer. Openmart sells to revenue leaders evaluating you against ZoomInfo, Apollo, Demandbase, and a long tail of contact-data plays. The way to win that conversation is data-quality proof points (verified contacts, freshness, accuracy on ICP signals) plus AI-native productivity claims that survive a CFO audit. I have done both halves of that argument before.

Open to relocating to the Bay Area for the right role. Boston-based today.
