Hiring Team, Plaud

Lifecycle marketing for a consumer AI product breaks at one specific seam: the user signs up because the product feels magical at first touch, then activation rate craters at the third meaningful interaction because the journey treats the buyer as if they were already familiar with what the product can do. The teams that hold activation are the ones whose onboarding is event-driven, not time-driven, and whose retention comms map to behavioral cohorts rather than calendar buckets.

I have built that loop. SwipeHire shipped solo on Python, OpenAI API, and React. ICP defined from a 30-conversation user discovery, GA4 + GTM event tracking and Amplitude cohort analysis instrumented from day one, 8+ A/B tests on activation flows, and a +25% activation lift across 50+ users. The product shape is structurally the same as Plaud at smaller scale: consumer AI utility, post-install drop-off, and a journey that has to teach the user what their data is good for before they realize they need to keep using it.

On the B2B side, I have run lifecycle programs at the other end of the spectrum. Plug Power: HubSpot drip and MQL nurture across account-level behavioral segmentation, retargeting funnels, suppression lists in Adobe Audience Manager. Pixis: 8-client B2B SaaS portfolio with per-client renewal-aligned playbooks that cut client churn 50%. The B2C and B2B muscles do not usually live on the same CV; the JD calls for both, and that is the rare combination I bring.

On AI-product fluency, four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. AI for marketing is not a 2026 bolt-on for me; it is the operating system I built one product on.

SF works. Open to relocating from Boston. Resume attached.
