Hiring Team, Sage

The hardest seam in B2B demand generation is the one between paid spend and Salesforce campaign attribution. Most teams have respectable cost-per-lead numbers, a HubSpot drip running, and a SEO program shipping pages, and the three never reconcile against the closed-won number that actually matters. The teams that scale pipeline efficiently are the ones that have rebuilt the loop from ad click to SQL with one UTM spec, one source-of-truth in Salesforce, and a dashboard the CFO trusts.

I have done that rebuild. At Plug Power I owned the full demand engine end-to-end: paid stack on Google Ads, Meta, LinkedIn, and Adobe-driven programmatic with -25% CPA and +20% conversion, plus closed-loop attribution rebuilt across HubSpot, Salesforce, Adobe Analytics, GA4, and GTM. The UTM spec was written from scratch. GTM containers got rebuilt. Lead routing was validated through Salesforce campaign attribution before any cohort number got presented. The same MarTech stack Sage runs on.

On SEO and inbound, I owned the AEO and GEO program at Plug Power. On-page and technical SEO, schema rebuilds, content-cluster mapping, FAQ pages structured for ChatGPT, Claude, and Perplexity citation. The technical work and the content cadence were one program, not two. Email and lifecycle ran in HubSpot alongside it: drip sequences, MQL nurture, account-level segmentation tied to the same Salesforce campaign attribution.

On agency and vendor side, Pixis is the analog. Eight-client B2B SaaS portfolio, per-client monthly media budgets ranging \$15K to \$90K, eight-person team across creative, account management, and platform specialists. Weekly client QBRs. Trained eight enterprise marketers on AI bidding tools. Replaced two underperforming channels mid-quarter when KPIs slipped. That is the agency-management muscle the JD calls out.

On AI workflows, SwipeHire shipped solo on Python, OpenAI API, and React. Four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. AI for marketing is not a 2026 add-on for me; it is the operating system I built one product on.

NYC works. Open to relocating. Resume attached.
