Hiring Team, Paid Media Center of Excellence, Wells Fargo CSBB

Advancing an enterprise AdTech stack is 20% platform selection and 80% adoption. Most teams spend months evaluating vendors, configuring integrations, and building dashboards. Then they launch and nobody uses it because Sales was never in the room when the requirements were written and Marketing was never trained on the output. The stack works. Nobody trusts it. The platform that wins is the one where the people who built it also sold it internally before go-live.

I have done both sides of this at two companies.

At Plug Power I evaluated, selected, and built the full AdTech and MarTech stack from scratch: Salesforce for CRM and pipeline, Adobe Analytics for measurement, Adobe Audience Manager for segmentation and retargeting, GA4, and Google Tag Manager. No infrastructure existed before I arrived. I configured every integration, trained Sales and Marketing and IT on adoption, built closed-loop attribution from ad click to qualified pipeline, and developed business cases with ROI projections for each platform investment. -25% CPA and +20% conversion came from the adoption, not the platform choice.

At Pixis I operated on the other side of the table: running paid media on an AI-powered adtech platform. \$1.4M in budgets across 8 global D2C and e-commerce clients. Google, Meta, programmatic DSPs, retail media (Amazon Sponsored Products, Criteo). I drove adoption of Pixis's AI bidding and creative optimization tools across client accounts, improving platform utilization and renewal rates. 3x ROAS in 30 days for a leading beauty brand. Client churn dropped 50%.

Three other things from the JD that line up directly:

Lead without authority. At Sensata I drove enterprise adoption of a new SQL + GA4 measurement framework across 50K+ devices and 3 regional teams without any direct reports in those teams. Education, socialization, documentation, ongoing support. Feature adoption lifted 18%. The framework worked because I led the rollout like an internal product launch, not a mandate.

Business case development. I built 3-scenario pricing and investment models with sensitivity analysis for Sensata's AP26 planning cycle and presented them to senior executives. I also built SwipeHire (a production AI tool with OpenAI API) where I evaluated API platforms, integrated them, and justified each technology decision with measurable outcomes.

Retail media platform fluency. I hold Advanced certifications in Amazon Retail Ads and Amazon Sponsored Ads plus Criteo certification. These are not resume-padding. I ran campaigns on these platforms for D2C beauty and e-commerce clients at Pixis.

MS Marketing Analytics (Simon, U. of Rochester). Open to Wilmington, DE.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/wells-fargo

Would love 15 to 20 minutes to hear what the current stack looks like and where the biggest adoption gap is.
