Hiring Team, Benchling,

The Platform PMM role lines up tightly with how I already work. At Sensata, I position a deeply technical product (industrial sensing platforms with embedded firmware, telemetry, and integration layers) to a buyer set that mirrors Benchling's: engineers, IT architects, and domain experts who reject generic vendor narratives and want to see the data. My core practice is customer-interview-driven positioning, then translating that into launch assets that hold up under technical scrutiny.

Direct evidence of fit:

- **B2B SaaS platform GTM (Sensata, current):** Own positioning, launch, and pricing for new sensing product lines across NA and EU. **\$2M+ first-year revenue** via cross-functional GTM with Product, Sales, Engineering, and Finance. Translated event-driven telemetry and API data into narratives that landed with technical evaluators.
- **30+ structured customer interviews** with OEMs, distributors, and engineering buyers translating insights into product roadmap, positioning, and competitive messaging. CSAT **+22%**, feature adoption **+18%** across 50K+ industrial devices. Same consultative VOC motion the Platform role describes for scientists and IT architects.
- **Sales enablement library used by 50+ reps** that lifted win rates **+30%**: battlecards, demo flows, competitive teardowns, ROI calculators. Built credibility with deeply technical, skeptical buyers - the same shape as Benchling's data engineers and lab IT.
- **Analytics and platform fluency:** Daily work on **SQL + Power BI + Tableau + Python + GA4**. Designed an executive Power BI dashboard tracking 1,200 opportunities and a \$627M margin-recovery pipeline across 3 regions and 20 product lines. Comfortable positioning data platforms, APIs, and integration backbones.
- **AI-driven daily workflow:** Use AI tooling for competitive research synthesis, messaging iteration, customer-interview coding, and rapid asset drafting. Shipped SwipeHire (AI-driven job-matching product) solo on Python + React + REST APIs.

Credentials: MS in Marketing Analytics from **Simon Business School (U. of Rochester)**; BE Mechanical Engineering from **BITS Pilani** (technical undergrad keeps me fluent with engineering buyers). Advanced Pricing Certified. Boston-based, open to relocating for SF hybrid. Would love to talk.
