

MARKETING ASSOCIATE PITCH DECK

I have **lived** the customer-research **problem** Conveo solves.

30+ structured interviews with OEMs and distributors at Sensata. Most of my time was logistics, not insight. Conveo flips that.

Why marketing Conveo means marketing to people like me

Conveo's buyers are marketing, product, and research teams running customer research. I just spent 18 months as one of those people at Sensata. I know the friction, the budget, and what makes a research tool actually trustworthy.

RESEARCH PRACTITIONER

30+

Structured interviews at Sensata with OEMs + distributors. Voice-of-customer, win/loss analysis, persona work. Translated to roadmap and positioning.

AI PLATFORM MARKETER

8 clients

Pixis B2B SaaS AI marketing platform. Trained enterprise marketing teams on the AI engine. \$15K-\$90K per-client monthly.

MULTI-CHANNEL RANGE

-25% CPA

Plug Power: Google + Meta + LinkedIn + programmatic. 3 conferences + 6 webinars. SEO + AEO/GEO + lifecycle email.

CONVEO JD REQUIREMENT	DIRECT EVIDENCE
Develop content that resonates with various buyer personas	Sensata: built positioning for OEM-engineer, distributor-sales, and end-customer personas across 3 regions.
Excited to learn about customers and understand problems	Sensata: ran 30+ structured customer interviews. SwipeHire: 50+ user conversations to drive product iteration.
Analytical, data-driven, adapt to market feedback	MS Marketing Analytics, Simon. SQL + Power BI + Python at Sensata. Holdout incrementality at Pixis. Closed-loop attribution at Plug Power.
Plan and execute multi-channel initiatives	Plug Power: paid + email + SEO + 3 conferences + 6 webinars. Pixis: managed 8 clients across all paid channels at scale.
Creative content development	Sensata: sales enablement library used by 50+ reps; lifted win rates 30%. Plug Power: product announcements, case studies, long-form web content.

The Sensata-to-Conveo translation

If I had had Conveo at Sensata, my 30+ interviews would have taken 1 week, not 4. The Conveo buyer is me, 6 months ago, drowning in Calendly invites.

What I learned running 30+ research interviews

- **Time-to-insight bottleneck:** 60% of cycle time is scheduling + recap, not interview itself
- **Bias problem:** By interview 20 of 30, you start leading. AI-led keeps consistency
- **Synthesis decay:** Insights peak 24 hours after interview. Most teams synthesize too late
- **Trust threshold:** Research teams adopt fast when transcripts + verbatim quotes are clean

"These are the exact pain points Conveo solves. I can talk to a Head of Insights about them without faking domain knowledge."

How I would market Conveo on day 30

- **Practitioner content:** "What I wish I had known before running 30 research interviews" - story-led, friction-first, no platform pitch
- **ICP segmentation:** marketing research teams vs. product research vs. UX research. Different proof points each
- **Case study factory:** 1 customer case study per week, anchored to a single "decisions made in days" hero metric
- **Comparison content:** Conveo vs. traditional research panels, vs. Calendly + Zoom + manual synthesis, vs. generic AI tools

Practitioner voice

Customer-led

Multi-channel

AI-native

My 30 / 60 / 90 at Conveo

Marketing Associate role on a 24-person team. Calibrated to remote-US cadence and Conveo's research-buyer audience.

30

Days 1-30: Sit with 5 existing customers. Pull product analytics. Map the 3 highest-friction ICPs. Ship 2 case studies + 1 "Conveo vs. status quo" comparison page. Audit Conveo's website analytics for conversion leaks.

60

Days 31-60: Launch a practitioner content series ("30 interviews, 4 weeks: what AI changes"). Start a partner outreach motion to research-tool ecosystems. Stand up a paid pilot on LinkedIn + Reddit research communities.

90

Days 61-90: Own a measurable inbound number. Ship a flagship research report (Conveo data, methodology written by me, customer-validated). Have 4+ case studies live. Hand off a content playbook.

The AI-builder angle

Conveo is AI-native. The marketer should be too. I founded **SwipeHire** on **Python + OpenAI API + React** (app.swipehire.io). 50+ users, +25% activation, zero paid budget.

Plus 4 Anthropic Claude certifications. I have built with the same primitives Conveo uses.
