Hiring Team, Growth Marketing, 7AI

Growth marketing at an AI-native company should be done by someone who actually builds with the stack, not someone who rebrands someone else's demo. Agentic security is the first category outside of coding where AI agents have moved from demo to production at Fortune 500 scale, and the marketer who matches that shape is the one who ships Claude and OpenAI in their own workflow as default. I do.

Three tracks that converge on this role.

I am an AI builder, not just an AI-user. I founded SwipeHire, a production AI product on OpenAI API + React. I wrote the PRD, shipped the MVP in six weeks, onboarded 50+ users, and ran 8+ A/B tests that lifted activation 25%. I run a Claude draft-and-critique pipeline for ad copy and landing variants: one Claude call drafts five per brief, a second scores against the conversion signal, a human gate approves before push. 8x variant velocity at Pixis-comparable ad volume. I hold four Anthropic Claude certifications including Building with the Claude API. That is rare in a growth-marketing candidate pool, and it is the exact fluency 7AI's marketing motion needs.

I have run growth for an AI platform at comparable Series-stage scale. At Pixis I operated on an AI adtech SaaS, managing an 8-person team and \$1.4M in media across 8 global enterprise clients. 3x ROAS in 30 days for a leading fashion brand. Client churn down 50% through channel diversification and vertical-specific playbooks. My job was the translation layer between the ML product and customer GTM, which is the shape of marketing to enterprise CISOs for an autonomous security agent.

I have built a B2B demand-gen stack from scratch. At Plug Power I evaluated, selected, and implemented Salesforce + Adobe Analytics + Adobe Audience Manager + GA + GTM, then ran paid across Google, SA360, Meta, and LinkedIn with closed-loop attribution from ad click to SQL. -25% CPA, +20% conversion, -15% wasted spend. The stack transfers to whatever 7AI uses; the discipline does not.

On the JD specifics.

Build, experiment, drive measurable impact. SwipeHire is the six-week zero-to-one proof. Pixis is the stage-match. Plug Power is the stack-build.

Cybersecurity domain. Not direct. Enterprise technical-buyer motion is (Sensata industrial OEMs, Plug Power energy enterprise). Give me 30 days on the cybersecurity vocabulary and the competitive landscape; I ship with Claude so research-to-brief cycles are fast.

Boston HQ. Boston-based candidate. Zero relocation friction. Available immediately.

MS Marketing Analytics (Simon, Rochester); BE Mechanical Engineering (BITS Pilani).

Resume and portfolio: adhithyabhaskar.vercel.app/ref/7ai

Would welcome 20 minutes on where the CISO funnel currently leaks and what the first three experiments should be.
