Hiring Team, Cat Digital, Generative AI Product Management

Parts search at industrial scale is an unusual problem. The user is a dealer mechanic who needs the right SKU in 40 seconds, not a consumer browsing categories. The catalog has decades of SKU conventions, regional variants, and cross-compatibility rules that a generic LLM will confidently get wrong. The winning product is not a chatbot bolted onto a search box. It is a system that encodes what the mechanic already knows, retrieves what the catalog knows, and lets the LLM translate between the two with the right guardrails.

I sit at a rare intersection for this role: industrial B2B product management, hands-on GenAI product building, and e-commerce catalog operations.

Industrial PM is my full-time job. At Sensata Technologies I manage a 100+ feature backlog across 3 regions and 50,000+ connected industrial devices. I built the SQL and GA4 KPI framework the product team runs on, drove \$2M+ first-year revenue on new sensing launches, and ran 30+ structured interviews with OEMs and distributors. I know how industrial customers actually talk about their problems, and I know how dealer-network feedback loops work.

GenAI product building is what I do on the side. I founded SwipeHire, a production AI job-matching platform on OpenAI API and React. I wrote the PRD, shipped the MVP in six weeks, onboarded 50+ users, and ran 8+ A/B tests that lifted activation 25%. The non-obvious design move was separating draft from judge: one LLM call drafts, a second scores it, human gate ships. I hold four Anthropic certifications including Building with the Claude API, and I also built a financial-analytics product (NSE Paper-Trading Bot) using Claude for news and catalyst analysis alongside rule-based technical scoring. The stack is the same shape as AI-assisted parts discovery.

E-commerce catalog ops is where this role lives day-to-day. At GenY I rebuilt a D2C brand's Google Merchant Center and Meta catalog feeds from scratch for 16x ROAS. At Pixis I managed \$1.4M in media spend on an AI adtech SaaS across 8 enterprise clients with weekly feed-quality reviews. I hold Amazon Retail Ads Advanced, Amazon Sponsored Ads Advanced, and Criteo certs. Catalog hygiene is the highest-leverage and most under-invested lever in Shopping.

**On the JD specifics.** I translate AI concepts for mixed audiences (BE Mech at BITS plus MS Marketing Analytics at Simon means I can read eng specs, commerce PRDs, and customer transcripts in the same afternoon). I navigate ambiguity by instrumenting LLM apps on day one: cost per call, latency, quality, safety gate. LLM apps fail silently. And I run Agile backlogs, Power BI, and Python daily; my Sensata Bleeders and Leakers dashboard tracks 1,200 pricing opportunities worth \$627M.

Committed to relocating to Chicago or Peoria. Cat Digital is the rare industrial company shipping production AI, and parts search is the highest-leverage GenAI application at B2B scale.

Resume and portfolio: [adhithyabhaskar.vercel.app/ref/caterpillar](https://adhithyabhaskar.vercel.app/ref/caterpillar)

Would welcome 20 minutes on how the team is framing part-identification accuracy versus conversational recall, and what the first three experiments should be.
