Hiring Team, Emergn

Emergn's pitch to clients is, in shorthand, "we will teach you to ship product the right way so you never need us again." Value, Flow, Quality. I have spent four years doing exactly that inside companies, just without a methodology label on it. Rebuilt Plug Power's MarTech so Sales finally trusted the attribution. Stood up Sensata's vertical enablement so 50+ reps actually won the deals they were running. Shipped SwipeHire solo in six weeks so the product proved itself to users before I spent a dollar on acquisition. The VFQ philosophy is how I already work. This posting reads like it was written for the motion I have been practicing.

Pipeline with a line of sight to revenue, not just MQLs. At Plug Power I rebuilt the full B2B MarTech stack from scratch (Salesforce + HubSpot + Adobe Analytics + Adobe Audience Manager + GA + GTM), stood up closed-loop attribution from ad click to SQL, and trained Sales + IT on the new numbers so they actually trusted the handoff. -25% CPA, +20% conversion. The platform is 20% of that work. The 80% is the shared MQL/SQL definition conversation with Sales, the handoff process, and the weekly review cadence. That is the exact motion this role calls for.

Account-targeted B2B demand gen. Ran LinkedIn + SA360 + Meta + email campaigns targeting named hydrogen-energy accounts at Plug Power. At Sensata, built vertical battlecards + case-study one-pagers for 50+ reps across OEM and distributor segments, lifting win rates 30% and generating +35% qualified leads on \$2M+ first-year launches. 30+ structured customer interviews shaped the positioning; leadership quoted the customer language back in board decks. No one on that team called it ABM, but the shape is the same: sharpen ICP, target named accounts, sequence outreach with BDRs, measure pipeline not clicks.

Enterprise SaaS account ownership. At Pixis I owned an 8-client enterprise book on an AI adtech SaaS with a \$1.4M shared budget. Delivered 3x ROAS in 30 days for a leading fashion brand, cut churn 50% across the book, built the vertical case-study library that Sales used for expansion pitches. AI-platform buyers are measurement-skeptical by default; winning them means proving value in the shape of their category. The Praxis + Stella buyer is the same archetype.

Platform GTM narrative. At SwipeHire I wrote the positioning, built the landing pages, shipped the lifecycle, ran 8+ A/B tests, and built cohort retention dashboards. Six weeks nothing to 50+ users with the activation loop live. The Safran consulting project took the same muscle to the enterprise side: TAM/SAM across four verticals, positioning for three B2B product lines, presented to leadership. Translating platform capability into sales-ready collateral is the default mode, not a stretch.

Stella AI fluency. Four Anthropic Claude certifications, including Building with the Claude API. Production AI shipped (OpenAI API, prompt engineering, structured output, Claude draft-and-critique pipeline for content experimentation). When the Stella platform needs demand-gen assets that show what LLMs can do inside a product workspace, I have built the exact pattern and can translate it into sales-ready stories.

On years. Posting asks 5+; I am at 4+ plus founder scope. MarTech rebuild + 8-client enterprise book + solo AI product is a scope case, not a ticker case. Worth a screen on substance.

Logistics. Boston-based. Boston hybrid is ideal. Available to screen this week.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/emergn

Would welcome 20 minutes on the current Praxis + Stella demand narrative and where the pipeline gap is biggest right now.
