Hiring Team, EnergySage

In 2026, a homeowner asking "is solar worth it" does not open Google first. They open ChatGPT, Claude, or Perplexity, and the answer the model gives is decided months earlier by which marketplace the model has already internalized as the authoritative source. EnergySage is uniquely positioned to be that source for US clean energy, because the Marketplace Report is already the canonical dataset the industry cites. The job of an SEO Manager here is not to rank on Google. It is to win the citation war inside the LLMs that are replacing Google. I have been thinking about, and building for, that exact transition for two years.

AI citation fluency from the builder's side. I founded SwipeHire, a production AI product on OpenAI API and React. Beyond the growth work (50+ users, +25% activation), what matters here is that I implemented schema markup (JobPosting + Organization + structured output pipelines) specifically so the platform could be retrieved and cited by AI assistants. I hold four Anthropic Claude certifications including Building with the Claude API, and I run a Claude draft-and-critique content pipeline (one call drafts, a second scores, a human gate ships) that gave me 8x content variant velocity at consistent E-E-A-T quality. When the JD says "understanding of how LLMs retrieve, evaluate, and cite content," that is a builder-side competency I already have.

Clean-energy vertical SEO. At Plug Power I owned SEO and keyword strategy for the B2B hydrogen-energy audience: keyword clusters across logistics, data center, and industrial verticals; landing-page structure; SME-authored content calendar; technical SEO partnership with engineering on site architecture, schema, and Core Web Vitals. -25% CPA, +20% conversion on blended paid + organic. Hydrogen is adjacent to residential solar in domain shape: technical buyer (or buyer who wants to feel like an expert), long consideration window, high-trust content, E-E-A-T-first authority. The vertical pattern transfers cleanly to EnergySage's solar + heat pump + EV content problem.

D2C marketplace SEO + structured data. At GenY Medium I rebuilt a retail D2C brand's SEO, Google Merchant Center, and Meta catalog: product feed hygiene, schema markup at SKU level, seasonal content calendar. 16x ROAS on blended organic + paid. EnergySage is a marketplace, and marketplaces live or die on feed quality + entity-oriented structured data. That muscle is already built.

Analytical + technical. GA4, Google Search Console, and Ahrefs are daily tools. MS Marketing Analytics at Simon (Rochester) on causal inference and experiment design. SQL daily at Sensata on 50K+ connected devices. Power BI dashboard on \$627M in opportunities, \$433M in margin gaps surfaced for Sales leadership. Data to action is how I have been operating for four years. Storyblok is a 1-week ramp from WordPress and the headless architecture experience I already have from SwipeHire.

On fit. SEO Manager with a GEO mandate at a clean-energy consumer marketplace, remote US, reporting into an Acquisition Marketing Director who runs SEO as a growth lever, not a compliance box. That is the rare role that needs the exact four-sided profile I happen to have built: SEO + GEO + clean-energy + AI-builder fluency.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/energysage

Would welcome 20 minutes on EnergySage's current GEO thesis and where the biggest citation-rate gap is right now across the Marketplace content.
