Hiring Team, Marketing Operations, FedEx Freight

Marketing operations is 20% tech selection and 80% adoption. Most organizations spend months evaluating platforms, configuring integrations, and wiring dashboards. Then they launch, and nobody uses it because Sales was not in the room when the requirements were written, and Marketing was never trained on the output. The stack works. Nobody trusts it. The advisor who actually moves the number is the one who treats MarTech ops as a rollout, not a launch.

I have done that motion twice.

At Plug Power I evaluated, selected, and built the full MarTech stack from scratch: Salesforce for CRM and pipeline, Adobe Analytics for measurement, Adobe Audience Manager for segmentation and retargeting, GA, and Google Tag Manager. No infrastructure existed before I arrived. I configured every integration, trained Sales and Marketing and IT on adoption, built closed-loop attribution from ad click to qualified pipeline, and ran A/B tests on keywords, match types, and creatives. -25% CPA and +20% conversion came from the adoption work, not the platform choice.

At Sensata I run marketing ops as the governance layer for a 100+ feature Agile backlog across 3 regions and 50,000+ connected industrial devices. I built the SQL and GA4 KPI framework the product team runs on. I built a 4-page Power BI executive dashboard covering 1,200 pricing opportunities worth \$627M, with regional scorecards, pipeline funnel, and top-opportunity focus lists; it enabled leadership to identify \$433M in margin gaps. I ran 30+ structured interviews with OEMs and distributors and turned insight into product enhancements that raised CSAT 22%.

Three specific points from the JD:

Technology evaluation and implementation. Plug Power was a stack build from zero. I vendor-evaluated, scoped integrations, led implementation, and trained three functions on adoption. The handoff playbook is written.

Data governance and documentation. Sensata's KPI framework is governance-as-product: defined metrics, consistent grain, documented runbooks, weekly office hours for questions. I treat metric definition as a shared artifact, not a marketing-team-only document.

Change management and cross-functional collaboration. At Sensata I drove adoption of a new measurement framework across 3 regions and 50+ reps without direct authority. +18% feature adoption, +30% win rates via enablement. The trick is socializing 4x more than you build, and co-authoring with the people who have to use the artifact.

Add four Anthropic Claude certifications (Cowork, Code 101, 101, Building with the Claude API), production AI build experience (SwipeHire, OpenAI API + React, 50+ users, 8+ A/B tests), and MS Marketing Analytics from Simon / Rochester. AI-augmented ops workflows are not a side project; they are how I work daily.

On years: the posting calls for 5 years, I have 4+ plus founder experience. Happy to walk through scope in any conversation. Committed to relocating to Memphis.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/fedex-freight

Would welcome 20 minutes to hear what the current MarTech stack looks like and where the biggest adoption gap is.
