Hiring Team, Performance Marketing (via recruiter intro)

Performance marketing for a fintech selling unbiased financial advice is a trust problem before it is a paid-media problem. A clever creative that drives signups without landing the trust moment converts low and churns high. The winning operator designs the funnel around the part of the product that earns the click, not around the click itself. I have run that shape of paid motion before and am built for it.

Three proof tracks.

I have owned paid end-to-end, across Meta, Google, and programmatic, from strategy to execution. At Plug Power I owned the full paid program for a B2B audience on Google Ads, SA360, Meta, and LinkedIn. A/B testing on keywords, match types, creatives, and landing pages delivered -25% CPA and +20% conversion, with wasted spend down 15%. I also built the MarTech stack underneath (Salesforce + Adobe + GA + GTM) so the CAC and payback math could actually close the loop from ad click to SQL.

I have managed a real budget at Series-stage scale. At Pixis I ran \$1.4M in media across 8 global enterprise clients on an AI adtech SaaS. Weekly optimization cycles on Google, Meta, and programmatic. 3x ROAS in 30 days for a leading fashion brand via smart bidding + creative A/B tests + lookalikes. Client churn down 50% through channel diversification and vertical-specific playbooks. Same shape as running paid for a Series B fintech against a revenue target with no playbook.

I think in funnels, not clicks. SwipeHire is the production AI product I built on OpenAI API + React (50+ users, 8+ A/B tests, +25% activation). I tracked CAC per activated user weekly, not cost per signup. I ran a Claude draft-and-critique pipeline for ad copy variants: one LLM drafts five per brief, a second scores against conversion signal, a human gate ships. 8x variant velocity. I hold four Anthropic Claude certifications including Building with the Claude API. For fintech-domain proof: my NSE Paper-Trading Bot is a Python + live financial data + Claude API product for news and catalyst analysis.

On the JD specifics. Meta, Google, programmatic: all three daily at Pixis and Plug Power. CAC, LTV, payback-period reasoning: Plug Power attribution model, SwipeHire cohort tracking, Pixis 8-client ROAS math. Dashboards: Sensata Power BI on \$627M in opportunities, weekly exec decisioning. Attribution debate: always. Fast, no-playbook work: SwipeHire is the proof.

NYC Midtown fully on-site is a commitment I am ready to make. Relocating within 30-60 days of signing.

MS Marketing Analytics (Simon, Rochester); BE Mechanical Engineering (BITS Pilani).

Resume and portfolio: adhithyabhaskar.vercel.app/ref/fintech-series-b

Would welcome 20 minutes on where the funnel currently leaks and what the first three experiments should be.
