Hiring Team, Flip

Flip's JD asks for a performance marketer who can make paid acquisition a "predictable, data-driven growth engine" at a Series A Voice AI company selling into measurement-skeptical enterprise retail, healthcare, and transportation buyers. That is a specific motion, not a generic paid-marketing job. I have run exactly that shape of work three times now at increasing scale, and I bring the AI-infrastructure depth the JD calls out explicitly.

Plug Power, full paid stack rebuild from zero. I rebuilt the entire B2B performance marketing engine at Plug Power: Google + SA360 + LinkedIn + Meta on the paid side, plus Salesforce + HubSpot + Adobe Analytics + Adobe Audience Manager + GA + GTM on the MarTech + attribution side. Closed-loop attribution from ad click to SQL. -25% CPA, +20% conversion. The hydrogen-energy buyer is technical, measurement-skeptical, and long-cycle, which is the exact archetype Flip's enterprise customer lives in. The platform is 20% of the work; the 80% is the trust conversation with Sales that makes the attribution numbers get used.

Pixis, AI SaaS paid at enterprise scale. I owned 8 enterprise clients on an AI adtech SaaS with a \$1.4M shared budget across Google, Meta, and programmatic. 3x ROAS in 30 days for a leading fashion brand, -50% churn across the book. Built per-vertical playbooks that Sales used for expansion pitches. AI-platform enterprise CMOs are skeptical by default; winning their spend means proving value in the shape of their category, not in the shape of your template. Flip's retail and healthcare buyers are the same archetype.

AI model and infrastructure depth from the builder's side. Four Anthropic Claude certifications, including Building with the Claude API. I shipped SwipeHire, a production AI consumer product on OpenAI API and React, solo in six weeks (50+ users, +25% activation via 8+ A/B tests). I run a Claude draft-and-critique content pipeline in production for 8x variant velocity at consistent quality. When the JD says "deep understanding of the AI current model and infrastructure landscape," that is builder-side knowledge I already carry, not a competency I need to grow into. Voice AI specifically requires thinking about latency, grounding, and evaluation loops, all of which are closer in shape to my production LLM work than to a typical paid-marketing manager's resume.

AEO / GEO hands-on. SwipeHire ships with JobPosting + Organization schema markup, Core Web Vitals optimization, and structured-output pipelines specifically so it gets retrieved and cited by AI assistants. At Plug Power I owned SEO + keyword strategy for the B2B hydrogen audience. GenY D2C Google Merchant rebuild delivered 16x ROAS. The SEO + AEO side of the JD is five years of actual work, not a checkbox.

HubSpot is home. I rebuilt the Plug Power stack around HubSpot, shipped SwipeHire's lifecycle on it, and use it daily. Landing pages, email segmentation, automation, GA integration. Zero ramp.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/flip

Would welcome 20 minutes on where Lee is building the paid engine from right now and what the first 90-day priority looks like.
