Hiring Team, Joveo

My side project is a small, amateur version of your core product. SwipeHire is an AI job-matching platform I built solo in six weeks on OpenAI API and React. It auto-tailors resumes to JDs, scores match signal, and matches jobseekers to roles. Fifty users, 8+ A/B tests on onboarding, +25% activation. The architecture is a scrappier cousin of what Joveo does at enterprise scale: predictive matching, ML-driven ranking, programmatic optimization. I have been thinking about the recruitment-adtech problem set at 5pm for two years, and I would love to bring that obsession to 9am.

Pixis, AI adtech SaaS growth at enterprise scale. Owned an 8-client enterprise book (\$1.4M shared budget) on an AI marketing platform across Google, Meta, and programmatic. Ran weekly experimentation cycles (creative + channel + audience + bidding), delivered 3x ROAS in 30 days for a leading fashion brand, cut churn 50% across the book. The Pixis buyer was measurement-skeptical by default; the win was showing proof that looked like their category, not proof that looked like our template. Joveo's buyer is the same archetype.

Plug Power, full-funnel growth engine rebuild. Rebuilt the MarTech stack from scratch: Salesforce + HubSpot + Adobe + GA + GTM with closed-loop attribution from ad click to SQL. -25% CPA, +20% conversion on B2B hydrogen-energy acquisition. Ran A/B tests on paid, landing pages, and audience segments; built lifecycle email cadences (HubSpot) and audience segmentation (Adobe Audience Manager) for activation and nurture. The Joveo JD calls out SEO, referral, lifecycle email, and PLG; three of four are things I built hands-on at Plug Power, and the fourth (PLG) is what I did solo at SwipeHire.

Sensata, product-data + experimentation at scale. Built a SQL + GA4 measurement framework on 50K+ connected devices, surfaced feature-adoption gaps, and ran tests that lifted adoption 18%. Shipped a Power BI dashboard on 1,200 opportunities (\$627M target, \$433M gaps surfaced) that leadership uses to prioritize. Partnered with product, engineering, and data teams on a 100+ feature Agile backlog across 3 regions (+25% release velocity, -20% TTM). Cross-functional with product, eng, and data is my default shape.

SwipeHire, zero-to-one growth end-to-end. Beyond domain relevance, this is proof I can run the full funnel alone. Positioning, landing pages, SEO metadata, SEM, lifecycle emails, onboarding A/B tests, cohort retention dashboards, user support. Six weeks from nothing to 50+ users with the activation loop live and the retention data flowing. Bias to action and rapid iteration is not a phrase for me; it is the default mode.

Analytics stack. SQL daily. GA4 + GTM production. Mixpanel-style funnel and cohort dashboards (SwipeHire). Power BI + Tableau for executive reporting. MS Marketing Analytics at Simon (Rochester) on causal inference, experiment design, and pricing analytics. Amplitude/Mixpanel hands-on is the one-week ramp; the underlying statistical machinery transfers.

On the fit. Growth Manager owning acquisition plus activation plus retention at an AI-first recruitment adtech platform is, genuinely, the role I have been building toward. Fully remote is a positive. Joveo's AI-first thesis matches the four Anthropic Claude certifications I have shipped this year (Claude 101, Claude Code 101, Claude Cowork, Building with the Claude API) and the Claude draft-and-critique pipeline I run for content experimentation.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/joveo. Would welcome 20 minutes on the current Joveo funnel and where the next 10x experiment is hiding.
