Hiring Team, Mirage

Captions' subscription economics do not live in paid acquisition. They live inside the onboarding flow, the push notification that lands on day 3, the in-app prompt that recovers a stalled trial, and the winback email that gets a lapsed creator to come back. At an AI-native consumer app, lifecycle marketing is not the CRM team. It is the product team with a send button. That is exactly the role I want, and it is the shape of work I have been doing for four years, just at different scales.

SwipeHire, end-to-end subscription lifecycle solo. I founded SwipeHire, a production AI product on OpenAI API and React. Solo, six weeks, 50+ users, +25% activation via 8+ A/B tests. I wrote the landing pages, built the signup flow, instrumented GA4 + GTM for cohort tracking, shipped the onboarding email sequence, built the activation loop, and ran the retention dashboards. When the JD says "own campaign setup and QA in Iterable, including journeys, segmentation, and personalization," that is the motion I ran for SwipeHire without the Iterable label. Iterable is a one-week ramp from the HubSpot mental model I already carry.

Pixis, retention on an enterprise AI SaaS book. I owned 8 enterprise clients on an AI adtech SaaS with a \$1.4M shared budget. Built per-client retention playbooks, ran weekly experimentation (creative + channel + audience), and delivered 3x ROAS in 30 days for a leading fashion brand while cutting book-level churn 50%. Subscription churn is a relationship-proof problem before it is a metric problem. Captions' creator-economy buyer has the same psychology: they trial, hit one moment of magic or friction, and the next 72 hours decide whether they convert. The lifecycle programs are what carry them across.

Plug Power, MarTech + lifecycle infrastructure rebuild. I rebuilt the full B2B stack from scratch at Plug Power (Salesforce + HubSpot + Adobe Analytics + Adobe Audience Manager + GA + GTM), stood up closed-loop attribution, and shipped HubSpot lifecycle cadences (onboarding, activation, nurture, winback) for the hydrogen-energy buyer. -25% CPA, +20% conversion. The platform is 20% of the work; the 80% is the QA, the segmentation logic, the personalization rules, the handoff triggers. That is the "operational rigor" the JD calls out explicitly.

AI tools for marketing workflows, from the builder's side. I hold four Anthropic Claude certifications including Building with the Claude API, and I run a Claude draft-and-critique content pipeline in production (one call drafts, a second scores, a human gate ships) that gives me 8x variant velocity at consistent quality. When Mirage says "use AI tools to accelerate campaign production, copywriting, and testing," that is not a future capability I need to learn. It is how I already run content.

On the fit. Lifecycle Marketing Manager at an AI-native consumer subscription app that treats AI tooling as a core workflow lever, in NYC, at a Series C company with \$175M raised and real runway. This is the kind of role I have been building for.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/mirage

Boston-based; NYC relocation on the table. Available to screen this week. Would welcome 20 minutes on Captions' current lifecycle gaps and where the biggest activation-to-paid-conversion lift is hiding.
