Hiring Team, Growth, Prolific

Growth marketing for an AI infrastructure platform is not marketing for marketers. The buyer is an ML researcher who has ignored more cold outbound than most people have sent, and who will test every claim against your own docs before the first call. The marketer who wins is the one who has already shipped on the stack and can discuss RLHF reward quality or SFT data curation without reaching for a glossary.

I have done both sides of this.

I ship AI-augmented workflows instead of talking about them. I founded SwipeHire, a production AI job-matching product on OpenAI API + React: 50+ users, 8+ A/B tests, +25% activation. I built the resume-tailoring pipeline, the signal-based scoring layer (stack + seniority + company signals), and the full GA4 + GTM + event tracking stack around it. I hold Claude Cowork, Building with the Claude API, Claude Code 101, and Claude 101 certifications. Cowork is on your required-tools list. It is on mine because I use it weekly.

I have run growth for an AI platform at comparable stage. At Pixis I operated on an AI adtech SaaS, managing an 8-person team and a \$1.4M media budget across 8 global D2C and e-commerce clients on Google, Meta, programmatic, and retail media. 3x ROAS in 30 days for a leading fashion brand. Client churn down 50% through channel diversification and vertical-specific playbooks. I was the translation layer between ML product and customer GTM, which is exactly the motion your JD describes in reverse.

Three other points from the JD that line up directly:

Signal-based GTM. At Plug Power I built audience layers in Adobe Audience Manager + CRM around intent keywords, funding signals, and account-fit scoring: -25% CPA, +20% conversion, cleaner MQL-to-SQL on enterprise energy accounts. At SwipeHire I extended the same idea to visa, hiring cadence, and tech-stack signals scraped from public data.

Full funnel, pipeline-accountable. At Sensata I ran 30+ customer interviews with OEMs and distributors across NA and EU, built the GTM for new sensing products, and generated +35% qualified leads and \$2M+ in first-year pipeline. Same motion your role needs, just for a different technical audience.

AI-augmented execution. Claude + Zapier + custom GPTs are already how I draft, enrich, and personalize. I can stand up a Clay-based ICP waterfall on ML research labs, AI startups post-funding, and annotator-hiring enterprise teams inside a week, scored by GitHub + funding + hiring-intent signals.

MS Marketing Analytics (Simon, University of Rochester); BE Mechanical Engineering (BITS Pilani). Committed to relocating to New York for this role.

Resume and portfolio: adhithyabhaskar.vercel.app/ref/prolific

Would love 20 minutes to hear where pipeline currently leaks and what the first 90-day playbook should look like.
