Hiring Team, Faire

Faire's paid social program sits on top of a two-sided marketplace where retention and reengagement get harder every cohort, the metrics that matter are pipeline-level rather than CPL-level, and the team is openly inviting AI/automation pilots into the workflow. That stack lines up unusually cleanly with what I have been running on for the last four years, so I am writing.

On medium-to-large-scale paid social on Meta, Pixis is the closest analog. I ran an 8-client B2B SaaS and D2C portfolio at \$1.4M aggregate annual media book - per-client monthly budgets between \$15K and \$90K - across Meta, LinkedIn, Criteo retail-media, Amazon Ads, Google, and programmatic. On one D2C beauty client, a holdout-incrementality slice exposed two channels getting credit they had not earned; we reallocated spend on true lift and the brand cleared 3x ROAS the next month. On two other clients I replaced underperforming channels mid-quarter when blended numbers were hiding the truth. The incrementality-testing line in the JD is the muscle, not the slogan.

On retargeting and reengagement, Plug Power is the proof. I rebuilt the MarTech function from zero on Salesforce + Adobe Analytics + GA4 + GTM, with Adobe Audience Manager account-level retargeting funnels - 6 behavioral segments, 3 suppression lists, audience layers by title, seniority, and industry - and LinkedIn ABM layered on top. UTM spec written from scratch, lead-routing rules and SLA documentation feeding BDR and AE alerting. CPA fell 25%, conversion rose 20%, and the loop from ad click to Sales-Qualified Lead got traced and proven end to end.

On AI and automation tooling inside the paid program, I trained 8 enterprise marketers at Pixis on the platform's AI bidding and creative-automation tools - the same product category Smartly, Hunch, and Omneky compete in - and I have shipped two production AI products solo since: SwipeHire (a two-sided AI matching marketplace on Python + OpenAI API + React, 50+ users, +25% activation, 8 A/B tests with significance gates defined up front) and an NSE Paper-Trading Bot on Python + Claude API. Four Anthropic Claude certifications, Cursor + Claude as daily workflow.

On two-sided marketplaces and small-business products, SwipeHire is the working example. Two-sided products live or die on supply density on day one; the data day-one cohort retention work is what makes the back-half of the funnel possible. That mental model maps directly onto the retailer side of Faire's marketplace.

NYC works, SF works. Attaching my resume and have a portfolio with the full proof-point trail at adhi-growth-ai.vercel.app/ref/faire-paid-social. Looking forward to the conversation.
