

PITCH DECK | GROWTH MARKETING MANAGER, PAID SOCIAL | FAIRE

Two-sided marketplaces live or die on retention.

Paid social on the retailer side - holdout incrementality, retargeting, AI-native execution.

Pixis - \$1.4M aggregate annual book, 8 clients, Meta-led paid social

3x ROAS via holdout-incrementality slice on a D2C beauty client

Plug Power - Adobe AAM account-level retargeting + LinkedIn ABM (-25% CPA)

SwipeHire - two-sided AI matching marketplace shipped solo

4 Anthropic Claude Certifications + Cursor daily

Adhithya Rokhith Bhaskar

Each criterion on the left **has a working proof on the right.**

Six lines from the posting. Six things I've already shipped. Substance, not slogan.

What the JD asks for

"3-5 years managing medium-scale campaigns on Meta and other paid social platforms."

"Familiarity with A/B testing and incrementality testing."

"Experience with retargeting and reengagement campaigns."

"Proficiency with marketing automation tools like Smartly, Hunch, Omneky."

"Experience using AI and automation to improve workflows."

"Background in two-sided marketplaces or small-business products."

What I've actually shipped

Pixis 8-client B2B SaaS + D2C portfolio at \$1.4M aggregate book, per-client monthly \$15K-\$90K across Meta + LinkedIn + Criteo + Amazon + programmatic. Plus Plug Power Meta + LinkedIn ABM and GenY Meta-catalog rebuild (16x ROAS).

Pixis holdout-incrementality slice on a D2C beauty client. Exposed two over-credited channels. Reallocated spend on true lift. **3x ROAS the next month.**

Plug Power Adobe AAM account-level retargeting funnels: 6 behavioral segments, 3 suppression lists, audience layers by title + seniority + industry. LinkedIn ABM layered on top. -25% CPA, +20% conversion.

Trained 8 enterprise marketers at Pixis on the platform's AI bidding + creative-automation tools - the same product category Smartly, Hunch, and Omneky compete in. Daily operator inside that workflow shape.

4 Anthropic Claude certifications + 2 shipped AI products solo (SwipeHire on OpenAI API + NSE Bot on Claude API). Cursor + Claude as daily workflow.

SwipeHire is a literal two-sided AI matching marketplace built zero-to-one: job seekers on one side, recruiters on the other. The day-one cohort retention work transfers directly.

D2C beauty client at Pixis: 3x ROAS via holdout incrementality.

Blended ROAS looked fine. A holdout slice showed two channels were getting credit they had not earned. I cut the weak spend, doubled down on what was actually driving lift, and the brand cleared 3x ROAS the next month. This is the muscle that protects spend on the retailer side of a two-sided marketplace where the "easy" reengagement channels are usually the most over-credited.

BEFORE: Last-click credit hides the rot

Display Programmatic Credited 28% of conv. True lift: 6% <i>view-through inflation</i>	Affiliate Credited 19% of conv. True lift: 4% <i>coupon-pickoff</i>	Paid Search Credited 22% of conv. True lift: 31% <i>non-brand compounds</i>	Paid Social (Meta) Credited 18% True lift: 38% <i>prospecting carry</i>
---	--	--	--

AFTER: Reallocation on holdout-validated lift

Display Programmatic Spend cut 60% Retargeting-only retained \$ freed for Search + Social	Affiliate Spend cut 45% Coupon cap installed CAC discipline restored	Paid Search Spend up 35% Non-brand expansion Marginal ROAS held	Paid Social (Meta) Spend up 50% Weekly creative cycle Prospecting compounded
--	---	--	---

3x ROAS

in one month, validated by holdout incrementality

WHY THIS MATTERS FOR FAIRE

On a marketplace, retailer-reengagement spend is the channel most likely to get over-credited - the buyer would have come back anyway. Holdout incrementality is the only way to see the true repeat-purchase lift.

The discipline that drove the 3x ROAS - cut weak spend, double down on what works - is the same muscle that protects retailer LTV when blended ROAS looks fine but cohort retention is leaking.

Plug Power: retargeting that respects context, tracked end-to-end.

The JD asks for retargeting + reengagement and AI/automation pilots inside the paid program. I rebuilt this exact stack at Plug Power from zero. Different vertical (industrial energy vs B2B wholesale), same operator pattern - layered audiences, behavioral segments, suppression discipline, and proof end-to-end on Salesforce + Adobe + GA4 + GTM.

CHANNELS

Meta + LinkedIn ABM + Google Ads + Adobe-Driven Programmatic

A/B tested keywords, audiences, creative with sample-size + significance gates defined up front

RETARGETING + REENGAGEMENT

Adobe Audience Manager - account-level behavioral segments + audience layers + suppression lists

Title + seniority + industry-driven audiences | Lookalike expansion | Retargeting funnels for active vs dormant cohorts

TRACKING

UTM spec written from zero + GTM containers rebuilt + GA4 events validated + Adobe Analytics

Closed-loop attribution traced end-to-end from ad click through MQL through Sales-Qualified Lead

HANDOFF

Salesforce campaign attribution + lead-routing rules + SLA documentation feeding sales alerting

Outcomes: -25% CPA, +20% conversion, defended weekly to finance + sales

TRANSLATION TO FAIRE

Swap "title + seniority + industry" for "retailer category + recency + order-frequency + AOV". Swap "Sales-Qualified Lead" for "second-order retailer". The retargeting cohort logic and the closed-loop tracking discipline are identical.

SwipeHire's day-one GA4 + GTM + Amplitude instrumentation and 8 A/B tests with sample-size + significance gates is the landing-page rigor that drops in immediately.

Three experiments I'd run in the first thirty days on the retailer side.

Concrete and scoped. Each ships inside a month and produces a measurable retention outcome - not a CPL one.

EXPERIMENT 1 - HOLDOUT ON REENGAGEMENT

Retailer-cohort holdout slice on the largest reengagement audience

Pick the biggest retailer-reengagement audience currently running on Meta. Carve a matched holdout cell. Measure incremental repeat-purchase lift over 3 weeks against the exposed cell. Cut over-credited spend, reallocate to true lift.

Why first. On a marketplace, reengagement spend is the channel most likely to get over-credited - the retailer would have come back anyway. This is the Pixis 3x ROAS muscle applied to the retailer side.

EXPERIMENT 2 - AI PILOTS IN THE PAID PROGRAM

Three AI/automation pilots inside the existing workflow

(a) Creative-variant generation pipeline on the Claude API for retailer-segment-specific copy; (b) Hunch-style dynamic catalog templating for category-level retargeting variants; (c) Automated significance gating on every A/B test so the team stops calling winners early.

Why first. Direct fit to the JD's "leverage AI and automation tools" criterion. I trained 8 enterprise marketers on the Pixis AI bidding + creative platform - same product category as Smartly + Hunch + Omneky. Plus 4 Claude certs + 2 shipped AI products solo.

EXPERIMENT 3 - RETENTION DASHBOARD

One-page retailer-cohort retention dashboard in Power BI

Build a weekly retailer-cohort retention dashboard: CPM, CTR, CVR, ROAS sliced by retailer cohort + retention curve by months-since-acquisition. Surface the cohorts where reengagement is leaking and the ones where it is compounding. Become the artifact the team opens every Monday.

Why first. Same shape as the \$627M Bleeders & Leakers Power BI dashboard at Sensata (1,200 opportunities, 3 regions, 4 product families) - executive-facing artifact built for decision-making, not for show.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: which retailer cohort is currently leaking hardest on reengagement; how the team is currently splitting holdouts on Meta; and where the AI/automation pilots are most blocked today (data, tooling, or org velocity).

What I'd bring: a draft retailer-cohort holdout design scoped to one Meta reengagement audience, three concrete AI-automation pilots ready to scope, and a one-pager on how I'd structure the first 90 days on the retailer side.

NYC works. SF works. Flexible on the hybrid cadence.

15 min with the Faire team

or written async if that's easier on your week
