Hiring Team, Flagright

The Founding Growth Strategist seat asks for someone who can do four things at once: own positioning and segmentation for an AI-first regtech selling into Fortune 500 financial institutions; design 1:1 and 1:few named-account programs that actually move enterprise deals; build the sales enablement library and battlecards that AEs and BDRs trust; and operate at the marketing-sales seam with credibility on both sides. I have substance on each of these from two adjacent seats, plus a builder credential that the AI-first culture cares about.

On positioning and segmentation and sales enablement, Sensata is the closest analog. I ran 30+ structured customer interviews across buying committees (engineering, procurement, facilities) and translated the voice-of-customer signal into a positioning rewrite, sales enablement library, and battlecards shipped to 50+ reps. Win rate lifted 30%. I built playbooks across 4 product families and 20 product lines, and I led GTM for new product launches across NA + EU + 3 regions. The "translate technical products into compelling commercial narratives" line in the JD is exactly the work I've been doing for the last two years.

On account-level ABM and Sales routing, Plug Power is the analog. I built the account-level ABM stack from zero on Adobe Audience Manager and LinkedIn ABM. Behavioral segments, retargeting funnels, audience layers by title and seniority and industry. HubSpot lifecycle stages feeding sales-handoff workflows. Salesforce campaign attribution with lead-routing rules and SLA documentation that fed BDR and AE alerting. I also coordinated a 4-vendor MarTech RFP with Procurement and 6 internal stakeholders - the RFP-process muscle the JD names directly.

On multi-tier ABM at scale, Pixis is the analog. I ran an 8-client B2B SaaS portfolio - \$1.4M aggregate book, per-client \$15K-\$90K monthly - where each client was effectively a tiered account: bespoke ICP, cross-channel orchestration, weekly engagement-to-pipeline review. That's the 1:1 + 1:few + 1:many machinery the JD describes, at agency scale.

On the AI-builder credit at an AI-first regtech: SwipeHire is an AI matching product I built solo on Python + OpenAI API + React. NSE Paper-Trading Bot is a second AI product solo on the Claude API as an agentic reasoning layer over rule-based scoring. Plus four Anthropic Claude certifications and Cursor + Claude as daily workflow. The credibility to talk shop with the engineering team is the part most growth strategists won't have.

On the JD's must-have list, the one place I'd be straight with you is the "ABM operator who has actually worked with enterprise sales cycles" line. My account-level work has been in two B2B settings - industrial enterprise at Plug Power and B2B SaaS multi-client at Pixis. I haven't run a Fortune-500 banking enterprise deal cycle end-to-end. The pattern transfers; the financial-services vertical is the fastest closeable gap.

Attaching my resume and a 6-slide pitch deck mapping these proofs to the JD line-by-line, plus a draft 60-day plan scoped to one of Flagright's target Fortune 500 financial institutions. Full portfolio is at adhi-growth-ai.vercel.app/ref/flagright-fgs.

Open to relocating to the Bay Area for the right team. Looking forward to a conversation.

Portfolio: adhi-growth-ai.vercel.app/ref/flagright-fgs
