

PITCH DECK | FOUNDING GROWTH STRATEGIST, FLAGRIGHT

Positioning. ABM. Sales enablement. Built like an engineer.

The founding-growth shape, plus a builder credit the engineering team will care about.

Sensata - 30+ customer interviews -> positioning + 50-rep enablement -> +30% win rate

Plug Power - account-level ABM stack from zero + Salesforce SLA + RFP

SwipeHire + NSE Bot - 2 shipped AI products solo

4 Anthropic Claude Certifications

Adhithya Rokhith Bhaskar

Boston, MA | Open to Santa Clara relocation | arokhith@gmail.com | (929) 563-9974

The founding-growth-strategist seat is four jobs in one. Mine maps to each.

Most founding-strategist candidates can do two of the four cleanly. The combination is what makes this a hard hire. Below: my proof for each quadrant.

QUADRANT 1 - POSITIONING + MESSAGING

Sensata 30-interview positioning rewrite

Ran **30+ structured customer interviews** across buying committees (engineering, procurement, facilities). Translated voice-of-customer signal into a positioning rewrite + messaging frameworks by vertical + segment + persona. Shipped a sales enablement library and battlecards to **50+ reps**. Win rate lifted **30%**. Direct analog to the JD's "define positioning + messaging by vertical + segment + persona + channel" line.

QUADRANT 2 - NAMED-ACCOUNT ABM

Plug Power account-level stack from zero

Built the account-level ABM stack from zero on **Adobe Audience Manager + LinkedIn ABM**: behavioral segments, retargeting funnels, audience layers by title + seniority + industry. HubSpot account-level lifecycle stages feeding sales-handoff workflows. **Salesforce campaign attribution + lead-routing rules + SLA documentation** feeding BDR and AE alerting. -25% CPA, +20% conversion.

QUADRANT 3 - SALES ENABLEMENT + RFP

Pixis multi-tier + Plug Power RFP coordination

At Pixis, the **8-client B2B SaaS portfolio** ran as multi-tier ABM at agency scale: per-tier playbooks, weekly QBRs, tiered creative + measurement cadence. At Plug Power, I coordinated a **4-vendor MarTech RFP** with Procurement and 6 internal stakeholders + SLA documentation. The RFP-process muscle the JD names directly.

QUADRANT 4 - AI-BUILDER CREDIT

Two shipped AI products + 4 Claude certs

SwipeHire on Python + OpenAI API + React (50 users, 8 A/B tests, +25% activation). **NSE Paper-Trading Bot** on Python + Claude API as agentic reasoning over rule-based scoring. **4 Anthropic Claude certifications** + Cursor + Claude daily workflow. The credibility to shop with Flagright's engineering team - which most founding-growth-strategist candidates won't bring.

30 interviews. A positioning rewrite. 50 reps trained. +30% win rate.

The Sensata customer-story pipeline I ran is the working methodology for the JD's positioning + messaging + sales enablement responsibilities. The structure transfers directly to Flagright's enterprise compliance buyer.

STEP 1 - DISCOVERY

30+ structured customer interviews

Across buying committee: engineering + procurement + facilities

Competitive + market mapping

10+ competitors analyzed; segment + vertical priorities defined

STEP 2 - SYNTHESIS

Positioning + messaging frameworks by vertical + segment + persona

Value props translated from technical specs into commercial narrative

STEP 3 - SALES ENABLEMENT LIBRARY

Battlecards

Competitive minefields
Persona objection handling

Sales playbooks

Per-segment scripts
RFP-response templates

Case-study pipeline

Per-vertical proof points
Executive narrative decks

STEP 4 - ROLLOUT + MEASUREMENT

Trained 50+ reps; measured win-rate delta + cycle-time delta + deal-size delta

Outcome: +30% win rate, +35% qualified leads, \$2M+ first-year pipeline

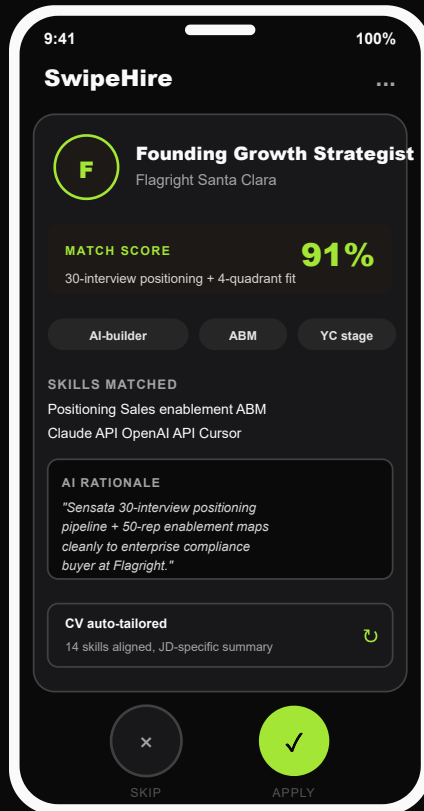

TRANSLATION TO FLAGRIGHT

Swap "industrial sensors + telemetry" for "AI financial-crime compliance." Swap "engineering + procurement + facilities" for "Chief Compliance Officer + Head of Financial Crime + BSA Officer + CISO."

The methodology is the same. The buyer is different. The first 90 days are the discovery + synthesis sprint.

I'm a marketer **who actually ships AI products.**

At an AI-first regtech, the founding-growth-strategist who can shop with engineering is the one who can sell the product credibly to a CISO or Head of Financial Crime. I've shipped two AI products solo.

The architecture, layer by layer

- 01 Deterministic input layer.** Resume parser on the OpenAI API, structured JSON output, skill normalization on a controlled taxonomy.
- 02 LLM reasoning layer.** LLM-scored matching on top of deterministic overlap. The LLM reasons; it doesn't replace the score.
- 03 Action layer.** Auto-tailored CV generated server-side on apply.
- 04 Instrumentation.** GA4 + GTM + Amplitude wired day one. Custom events on every step.
- 05 Eval loop.** Weekly review of LLM rationale outputs against measured user behavior. Prompt iteration as a daily ritual.

Why Flagright should care

When a CISO at a Fortune 500 bank asks "how does the model handle false positives at our transaction volumes," the founding-growth-strategist who has actually shipped **deterministic-layer + LLM-reasoning architecture** can answer credibly. The marketer who has only used Claude can't.

Three things I'd ship in the first sixty days at Flagright.

Concrete, scoped, and each produces a working artifact - not a strategy doc.

SHIP 1 - DISCOVERY SPRINT

25 Fortune-500 financial-crime buyer interviews

Run a 60-day discovery sprint: 25 structured interviews across Chief Compliance Officer + Head of Financial Crime + BSA Officer + CISO personas at top-50 Fortune 500 financial institutions. Buying-committee maps for the top-10 accounts. Vertical-specific value-prop drafts (banks vs payment processors vs neobanks vs fintech).

Why first. Sensata's 30-interview methodology in production at Flagright scale. Without this, every downstream artifact - battlecards, RFP responses, segment messaging - rests on a thin base.

SHIP 2 - COMPETITIVE POSITION

vs Hawk AI / ComplyAdvantage / Feedzai / Quantexa

Build the competitive-positioning framework: a 1-page Flagright vs Hawk vs ComplyAdvantage vs Feedzai vs Quantexa battlecard. Competitor minefield design - the specific questions an AE should plant to expose competitor weakness. Updated quarterly.

Why first. Win-rate compounds with battlecard quality. The JD explicitly names "competitive minefields that expose competitor weaknesses." Pixis competitive analysis discipline + Sensata battlecard library are the analogs.

SHIP 3 - ABM PILOT

5 named Fortune 500 accounts - 1:1 motion

Pick 5 named accounts not currently in pipeline. Run 1:1 plays: custom landing page + executive briefing draft + outbound sequence aligned to buying-committee map + LinkedIn ABM audience + tracking on engagement-to-pipeline progression. Hand the engagement signal to AEs through Salesforce alerting.

Why first. The fastest test of whether the new positioning + ABM stack actually produces pipeline. Plug Power Adobe AAM + LinkedIn ABM playbook scaled to enterprise-bank named accounts.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: which of the four quadrants (positioning, ABM, sales enablement, AI-builder) is the team's biggest current gap; how the marketing-sales seam is operating today; and where the CEO is putting their thumb on the scale between enterprise capture and mid-market expansion.

What I'd bring: a draft buying-committee map for one Fortune 500 financial institution on the target list, a one-page competitive-positioning sketch vs Hawk AI / ComplyAdvantage / Feedzai, and an honest take on what I'd close first in the "ABM operator with Fortune-500-bank enterprise sales cycle" gap.

Open to relocating to Santa Clara for the right team. Looking forward to a conversation.

15 min with the Flagright team

or written async if that's easier on your week
