

PITCH DECK | PERFORMANCE MARKETING MANAGER, FLAGRIGHT

Pipeline quality over CPL.

The operating philosophy I've already been running on.

Pixis - \$1.4M B2B SaaS book, 8 clients, holdout-incrementality discipline

Plug Power - closed-loop attribution from ad click to SQL

3x ROAS beauty-brand attribution restructure

2 shipped AI products solo (SwipeHire + NSE Bot)

4 Anthropic Claude Certifications

The JD's operating philosophy is the operating philosophy I've been running on.

Most performance-marketing JDs ask for tools. Yours asks for judgment. Each quote on the left has a working proof on the right.

The JD's operating principles

"Optimized for qualified pipeline, not cheap leads."

"Cut weak spend quickly, double down on what works."

"Push back on anything that does not drive real pipeline."

"Long, complex SaaS sales cycles, not just low-consideration lead gen."

"Retargeting, review platforms, landing-page experimentation in an enterprise context."

"Comfortable operating with imperfect data while maintaining high measurement standards."

What I've actually shipped

Pixis beauty brand: holdout-incrementality slice exposed two over-credited channels; reallocated spend on true lift; **3x ROAS the next month.**

Pixis Clients C and F: replaced two underperforming channels mid-quarter when blended numbers hid the truth. Cut/reallocate as a reflex, not a project.

Pixis weekly client CFO QBR cadence: defended budget against vanity-metric pressure; **cut client churn 50%** across the book.

Pixis 8-client B2B SaaS portfolio with \$1.4M aggregate; per-client \$15K-\$90K monthly; multi-month buying cycles, weekly CFO QBRs.

Plug Power Adobe AAM account-level retargeting funnels + LinkedIn ABM at industrial-enterprise scale; behavioral segments + audience layers + suppression.

Plug Power closed-loop attribution rebuild on Salesforce + Adobe + GA4 + GTM with sample-size + significance gates on every A/B test.

Pixis beauty brand: 3x ROAS via holdout incrementality.

The literal "pipeline quality, not CPL" muscle. Blended ROAS looked fine. A holdout-incrementality slice showed two channels were getting credit they had not earned. I cut the weak spend and doubled down. The brand cleared 3x ROAS the next month.

BEFORE: Last-click credit hides the rot

Display Programmatic Credited 28% of conv. True lift: 6% <i>view-through inflation</i>	Affiliate Credited 19% of conv. True lift: 4% <i>coupon-pickoff</i>	Paid Search Credited 22% of conv. True lift: 31% <i>non-brand compounds</i>	Paid Social Credited 18% True lift: 38% <i>prospecting carry</i>
---	--	--	---

AFTER: Reallocation on holdout-validated lift

Display Programmatic Spend cut 60% Retargeting-only retained \$ freed for Search/Social	Affiliate Spend cut 45% Coupon cap installed CAC discipline restored	Paid Search Spend up 35% Non-brand expansion Marginal ROAS held	Paid Social Spend up 50% Weekly creative cycle Prospecting compounded
--	---	--	--

3x ROAS

in one month, validated by holdout incrementality

WHY THIS MATTERS FOR FLAGRIGHT

Flagright's enterprise sales cycle won't have a "last-click" answer. Multi-month, multi-stakeholder, with intent platforms, review sites, and outbound all pulling on the same pipe.

*The discipline that drove the 3x ROAS at Pixis - **holdout incrementality, true-lift reallocation, pushback on vanity credit** - is the same muscle that protects your pipe at enterprise scale.*

Plug Power: ad click to Sales-Qualified Lead, every step proven.

The "high measurement standards with imperfect data" line in the JD is the literal description of this work. UTM spec from zero. GTM containers rebuilt. Lead routing and SLAs feeding BDR alerting through Salesforce. Account-level retargeting in Adobe AAM with behavioral segments + audience layers + suppression.

CHANNELS

Google Ads + LinkedIn ABM + Meta + Adobe-driven Programmatic

A/B tested keywords, audiences, creative with sample-size + significance gates defined up front

RETARGETING (ENTERPRISE-CONTEXT)

Adobe Audience Manager - account-level behavioral segments + audience layers + suppression lists

Title + seniority + industry-driven audiences | Lookalike expansion | Account-level retargeting funnels

TRACKING

UTM spec written from zero + GTM containers rebuilt + GA4 events validated + Adobe Analytics

Closed-loop attribution traced end-to-end from ad click through MQL through Sales-Qualified Lead

HANDOFF

Salesforce campaign attribution + lead-routing rules + SLA documentation feeding BDR/AE alerting

Outcomes: -25% CPA, +20% conversion, defended weekly to finance + sales

TRANSLATION TO FLAGRIGHT

Different vertical (industrial energy vs financial-crime compliance), same operator pattern. Account-level signals -> enterprise retargeting -> rigorous tracking -> sales-routed alerts -> pipeline conversion measured weekly.

SwipeHire's 8 A/B tests with sample-size and significance gates is the landing-page rigor that drops in immediately.

Three experiments I'd run in the first thirty days at Flagright.

Concrete and scoped. Each ships inside a month and produces a measurable pipeline outcome - not a CPL one.

EXPERIMENT 1 - AI-SEARCH AUDIT

Flagright vs Hawk AI / ComplyAdvantage / Feedzai on AI search

Audit Flagright's visibility on ChatGPT, Claude, Perplexity, and Google AI Overviews for the top-30 buyer queries ("AI transaction monitoring," "real-time AML," "automated case management"). Compare citation rates vs Hawk AI, ComplyAdvantage, Feedzai, Quantexa. Output: a 2-page teardown + content-cluster sprint to close the gaps.

Why first. AI search is where Fortune 500 compliance buyers start now. Owning these queries compounds for years. I've shipped this exact teardown shape before (Plug Power AEO/GEO + KKR audit teardown).

EXPERIMENT 2 - LINKEDIN ABM

Top-50 Fortune 500 financial institutions - account-level retargeting

Build LinkedIn ABM around top-50 Fortune 500 banks + payment processors + fintechs. Audience layers by title (Chief Compliance Officer, Head of Financial Crime, BSA Officer) + seniority + region. Account-level retargeting funnel mirroring the visit pattern. Suppression for closed-won + closed-lost. Sample-size and significance gates up front.

Why first. Direct application of the Plug Power Adobe AAM + LinkedIn ABM playbook to Flagright's enterprise ICP. The "high-intent demand + targeted mid-market plays" line in the JD describes it exactly.

EXPERIMENT 3 - PIPELINE QUALITY RESET

A "what would I cut today?" 30-min audit

Within week one: ride along with paid in its current state. Identify the one channel where blended numbers most likely hide the truth. Set up a 30-day holdout-incrementality test on that channel. Document the cut + reallocation plan, defend it with finance + sales, ship the experiment.

Why first. The fastest way to prove the JD's "cut weak spend, double down on what works" line is real for me, not a slogan. Pixis Client C/F muscle in production.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: which channel is currently the team's biggest measurement gap; whether the enterprise + mid-market split is balanced or top-heavy; and how the marketing-Sales seam is operating today on pipeline quality definitions.

What I'd bring: a draft AI-search teardown of Flagright vs Hawk AI / ComplyAdvantage / Feedzai scoped to a handful of queries, an honest take on which paid channel I'd cut first based on the public footprint, and a one-pager on how I'd structure the first 90 days.

US remote works. Looking forward to it.

15 min with the Flagright team

or written async if that's easier on your week
