Hiring Team, Gooseworks

Gooseworks is selling AI coworkers to GTM engineers and growth operators - the buyers who already think in systems, not channels. The JD names three archetypes a Founding Growth Engineer could come from. I cover two of them simultaneously, which is the differentiator, and I clear the non-negotiable "lives in Claude Code, built non-trivial agent systems" bar cleanly.

On archetype B (AI-native high-output growth IC who took a startup X-to-Y with measurable proof): I built and shipped **SwipeHire** solo - an AI job-matching platform on Python + OpenAI API + React. Defined ICP, ran competitor teardown, crafted positioning and visa-aware messaging, instrumented GA4 + GTM from day one, ran **8 A/B tests with significance gates defined up front**, and acquired **50+ early users via Reddit-organic + Twitter** (the exact channels the JD names). Activation moved **+25% V1 to V2**. That is a real X-to-Y with revenue-proxy proof, not a Product Hunt #1.

On archetype C (AI-native agency operator running growth-as-a-service for multiple companies, thinking in systems): I ran an **8-client B2B SaaS + D2C portfolio at \$1.4M aggregate annual book at Pixis**, with per-client monthly budgets between \$15K and \$90K, across Meta, LinkedIn, Google, Criteo, Amazon, and programmatic. On a D2C beauty client, a holdout-incrementality slice surfaced two over-credited channels - reallocated spend on true lift, the brand cleared **3x ROAS the next month**. On two other clients I replaced underperforming channels mid-quarter when blended numbers were hiding the truth. I also **trained 8 enterprise marketers on Pixis's AI bidding and creative-automation platform** (Smartly / Hunch / Omneky category) - so I have the muscle of teaching humans to use AI workflows at the customer interface.

On the non-negotiable signal - "lives in Claude Code, built non-trivial agent systems" - I hold **4 Anthropic Claude certifications** (Claude 101, Claude Code 101, Claude Cowork, Building with Claude API). **NSE Paper-Trading Bot** is a non-trivial agent system I built on Python + Claude API: live NSE data scanner with EMA + RSI + ATR technical-indicator pipeline, an AI-enhanced reasoning layer for news + catalyst analysis, automated capital-constraint filtering, and an interactive paper-trade dashboard. Cursor + Claude is my daily workflow, and I have productized a draft-and-critique pipeline for 8x velocity on shipping content + decks + outbound assets.

On the loop the JD describes - customer growth engines on one side, R&D into templated self-serve playbooks on the other - that is the exact shape of the work I want to be doing next. Plug Power MarTech rebuilt from zero (-25% CPA, +20% conversion) is the engineered-pipeline proof. SF in-person works.
