Hiring Team, Handshake

Handshake AI is hiring a growth marketer to engage and nurture a network of PhDs and researchers contributing to frontier model work. I have spent the last two years building SwipeHire - an AI career platform on Python + OpenAI API + React, solo, end-to-end - whose ICP sits in the same neighborhood: early-career and international students with specialized skill profiles, the kind of people who become tomorrow's PhDs. Structurally, my product is what Handshake AI is doing at \$1B scale. The fit is rare enough that I made an exception and wrote this note before applying.

On the literal "7-figure budget across at least 2 paid channels" must-have, the proof is Pixis. I managed a \$1.4M aggregate annual media book across an 8-client D2C portfolio, with per-client monthly budgets of \$15K to \$90K spread across Google, Meta, LinkedIn, Criteo retail-media, Amazon Ads, and programmatic. Six paid channels, weekly client CFO QBRs presenting ROI and iROAS. On one beauty-brand client I restructured the attribution model after a holdout-incrementality slice exposed two over-credited channels; reallocated spend on true lift, and the brand cleared 3x ROAS the next month. The "passion for AI research" criterion is real here too - I trained eight enterprise marketers on AI bidding tools as part of those QBRs.

On SEO + lifecycle + analytics, Plug Power is the analog. I built the MarTech function from zero on HubSpot + Salesforce + Adobe + GA4 + GTM. UTM spec written from scratch, GTM containers rebuilt, closed-loop attribution from ad click to Sales-Qualified Lead. Sequences, lifecycle stages, and MQL nurture drips architected end-to-end in HubSpot. SEO + AEO program shipped on top: technical SEO, content-cluster mapping, schema rebuilds, FAQ pages structured for ChatGPT, Claude, and Perplexity citation. CPA fell 25%, conversion rose 20%.

On the AI-builder side, four Anthropic Claude certifications behind a daily Cursor + Claude workflow, plus two shipped products: SwipeHire on OpenAI API and NSE Paper-Trading Bot on Claude API. Both use the same architecture pattern - a deterministic scoring layer underneath, an LLM reasoning layer on top. That is the same shape any expert-network-quality or data-labeling loop would take.

Attaching my resume and a 6-slide pitch deck that maps these proofs to the JD line-by-line, including a slide on three specific growth experiments I'd run in the first thirty days at Handshake AI. Full portfolio is at adhi-growth-ai.vercel.app/ref/handshake.

Boston-based, remote works. Looking forward to the conversation.
