Hiring Team, Hightouch

The AI Operations role asks for two stacks that usually live in different people. One is the AI-builder stack - APIs called from production code, Claude skills wired into real workflows, comfort with prompts and tool integration that goes past prompting and into shipping. The other is the GTM-operator stack - someone who has actually audited a sales-to-marketing-to-CS workflow, found the seams, and rebuilt the plumbing across HubSpot, Salesforce, GA, and the rest. I have both, and the convergence is what I have been building toward for the last two years.

On the AI-builder side: four Anthropic Claude certifications (101, Code 101, Cowork, Building with Claude API) and two shipped products. The NSE Paper-Trading Bot is a Python product on the Claude API, using the model as an agentic reasoning layer over news and catalyst context on top of a rule-based technical scoring engine. SwipeHire is a second product on Python, OpenAI API, and React, with GA4, GTM, and Amplitude instrumented day-one. Both shipped solo. Cursor and Claude run as my daily workflow, not as occasional toys.

On the GTM-operator side, Plug Power is the closest analog to the JD's "audit GTM workflows and identify automation opportunities" line. I built the MarTech function from scratch on HubSpot, Salesforce, Adobe, GA4, and GTM. UTM spec was written from zero. GTM containers got rebuilt. Sequences, pipelines, lifecycle stages, and account-level behavioral segmentation were architected in HubSpot, not inherited. Closed-loop attribution traveled from ad click to SQL through Salesforce campaign attribution. CPA dropped 25%, conversion went up 20%, but the work I would point to for this role is the system underneath, not the metric.

On the enablement-training criterion, Pixis is the proof. Eight-client B2B SaaS portfolio with per-client monthly media budgets of \$15K to \$90K, weekly client CFO QBRs. I trained eight enterprise marketers on AI bidding and creative tools as part of those QBRs - structured the curriculum, sequenced what to teach, measured what stuck. The translation work, AI methodology to procurement-ready outcome, is exactly the work this role asks for inside Hightouch.

What I haven't done before: Clay specifically, Hightouch's own composable CDP, or a formal RAG / knowledge-graph build. The base AI stack and the GTM stack work make those the fastest closeable gaps I have ever applied for.

Remote works; Boston-based. Resume attached. Happy to walk through the NSE Bot architecture or the Plug Power MarTech rebuild in 15 minutes whenever fits your week.
