Hiring Team, IntelliPro

The JD describes the digital-advertising operator I've been the last five years. Full-funnel paid across Google, Meta, TikTok, and programmatic; CAC/LTV/ROAS/payback-period economics translated into weekly performance reviews and monthly business reviews to leadership; attribution and tracking infrastructure built and maintained on GA4 + GTM + Meta CAPI + server-side; budget allocation and forecasting in fast-paced, small-team environments. Substance match across the responsibilities is direct.

On full-funnel paid at portfolio scale, Pixis is the closest analog. I ran an 8-client B2B SaaS and D2C book at \$1.4M aggregate annual spend with per-client monthly budgets between \$15K and \$90K across Meta, Google, LinkedIn, Criteo, Amazon, and programmatic. Weekly client CFO QBRs translated CAC, LTV, ROAS, and payback period into pipeline narrative. A holdout-incrementality slice on a D2C beauty client exposed two channels that were getting credit they hadn't earned; reallocated spend on true lift; cleared 3x ROAS the next month. On two other clients, I replaced underperforming channels mid-quarter when blended numbers hid the truth. Mid-quarter budget reallocation was the operating reflex across the book.

On building and maintaining attribution and tracking infrastructure, Plug Power is the proof. I rebuilt the entire stack from zero on Salesforce, Adobe Analytics, GA4, and GTM. UTM spec written from scratch, GTM containers rebuilt, GA4 events validated, lead-routing rules and SLA documentation feeding sales alerting end-to-end from ad click to Sales-Qualified Lead. Adobe Audience Manager handled account-level retargeting funnels with 6 behavioral segments, suppression lists, and audience layers by title, seniority, and industry. CPA fell 25%, conversion rose 20%, and the loop got traced and proven. Meta CAPI and server-side tagging follow the same architectural pattern - data layer first, platforms as consumers.

On regulated and high-consideration environments, Plug Power (clean-energy, DOE-regulated B2B), Sensata (automotive and aerospace industrial sensors, regulated B2B), and GenY (high-consideration D2C consumer with a 16x ROAS Shopping rebuild) cover the compliance + audit-trail mindset and the consumer-side considered-purchase mechanics.

On autonomous small-team execution, I shipped two production AI products solo - SwipeHire (a matching product on Python + OpenAI API + React with day-one GA4 + GTM + Amplitude instrumentation and 8 A/B tests with significance gates) and an NSE Paper-Trading Bot on Python + Claude API. Four Anthropic Claude certifications, Cursor + Claude as daily workflow.

Remote works. Resume attached; full proof trail at adhi-growth-ai.vercel.app/ref/intellipro-dam. Looking forward to the conversation.
