

PITCH DECK | DIGITAL ADVERTISING MANAGER | INTELLIPRO

The data layer is the contract.

Full-funnel paid across Google + Meta + TikTok + programmatic, built on attribution that holds up to audit.

5 yrs hands-on digital advertising operator

Pixis - \$1.4M aggregate book, 8 clients, CAC/LTV-anchored allocation

Plug Power - closed-loop attribution rebuilt from zero (-25% CPA)

3x ROAS via holdout incrementality on a D2C beauty client

4 Anthropic Claude Certifications + 2 production AI products solo

The JD reads like the last five years of operating notes.

Six lines from the posting. Six things already shipped. Substance, not slogan.

What the JD asks for

"5+ years hands-on digital advertising or performance marketing experience."

"Own end-to-end paid media across Google Ads, Meta, TikTok, and programmatic."

"Build and maintain attribution and tracking infrastructure (GA4, GTM, Meta CAPI, server-side tagging)."

"Define and manage CAC, LTV, ROAS, payback period, cost per conversion."

"2+ years in fintech, insurance, healthcare, or regulated / high-consideration consumer environments."

"Autonomous in fast-paced, small-team environments."

What I've actually shipped

5 years across Sensata (20+ mo), Plug Power (10 mo), Pixis (14 mo), GenY (18 mo) - mid-band match, neither stretch nor downlevel.

Pixis \$1.4M aggregate annual book across Meta + Google + LinkedIn + Criteo + Amazon + programmatic; **Plug Power** Meta + Google + LinkedIn ABM + Adobe-driven programmatic (-25% CPA).

Plug Power closed-loop attribution rebuilt from zero: UTM spec written, GTM containers, GA4 events, Salesforce campaign attribution + Adobe Audience Manager account-level retargeting funnels. Same architectural pattern as Meta CAPI + server-side.

Pixis weekly client CFO QBR cadence: CAC, LTV, ROAS, payback period as the operating vocabulary; cut book churn **50%** via LTV-focused account strategy.

30+ months in regulated B2B (Plug Power clean-energy DOE-regulated + Sensata automotive/aerospace) + **18 months high-consideration D2C** (GenY 16x ROAS). Audit-trail mindset + considered-purchase mechanics.

Two production AI products shipped solo: SwipeHire on Python + OpenAI API + React (day-one GA4 + GTM + Amplitude + 8 A/B tests with significance gates) + NSE Bot on Python + Claude API. The autonomous-builder pattern.

Plug Power: closed-loop attribution rebuilt from zero.

The JD's "build and maintain attribution and tracking infrastructure on GA4, GTM, Meta CAPI, server-side" is the literal description of this work. Channels are the consumer; the data layer is the contract. Meta CAPI + server-side tagging is the same architectural pattern - spec the data layer first, let the platforms consume it.

CHANNELS (CONSUMERS)

Meta + Google Ads + LinkedIn ABM + Adobe-Driven Programmatic

Full-funnel: prospecting + consideration + retargeting + reactivation | A/B tested with sample-size + significance gates

RETARGETING + REACTIVATION

Adobe Audience Manager - account-level behavioral segments + audience layers + suppression lists

6 behavioral segments | Audience layers by title + seniority + industry | Suppression for closed-won / closed-lost

DATA LAYER + TRACKING (THE CONTRACT)

UTM spec written from zero + GTM containers rebuilt + GA4 events validated + Adobe Analytics

Meta CAPI + server-side tagging follow this pattern: data-layer-first, platform-agnostic, audit-trail by design

HANDOFF + ECONOMICS

Salesforce campaign attribution + lead-routing rules + SLA documentation feeding sales alerting

Outcomes: -25% CPA, +20% conversion, CAC/LTV/payback defended weekly to finance + sales

TRANSLATION TO THIS SEAT

The architectural pattern is what transfers, not the specific stack. Swap Adobe Analytics for Snowplow / Segment / Rudderstack; swap LinkedIn ABM for Meta CAPI prospecting; swap industrial-energy ICP for fintech / insurance / healthcare cohorts.

The audit-trail mindset that worked in DOE-regulated clean energy maps directly to regulated consumer-finance and healthcare environments.

Pixis: \$1.4M aggregate book across 8 clients, CAC/LTV-anchored.

The JD asks for monthly + quarterly paid-media budget allocation and forecasting; weekly performance updates and monthly business reviews to leadership; CAC, LTV, ROAS, payback-period management. This is the operating shape of the Pixis tenure.

Client A B2B SaaS \$90K/mo META + GOOGLE + LINKEDIN	Client B D2C beauty \$75K/mo META + GOOGLE + CRITEO	Client C B2B SaaS \$55K/mo GOOGLE + LINKEDIN ABM	Client D D2C consumer \$40K/mo META + AMAZON
Client E D2C app \$35K/mo META + TIKTOK-ADJ + UA	Client F B2B SaaS \$30K/mo LINKEDIN ABM + PROGRAMMATIC	Client G D2C lifestyle \$25K/mo META + GOOGLE SHOPPING	Client H B2B SaaS \$15K/mo GOOGLE + LINKEDIN

Operating cadence. Weekly client CFO QBRs translating CAC, LTV, ROAS, and payback period into pipeline narrative. Monthly business reviews with budget reforecasts based on channel-level marginal ROAS.

The reflex. Mid-quarter channel swaps on 2 separate clients when blended ROAS hid the truth. Cut weak spend, redirect to true lift, re-pre-flight creative inside 2 weeks.

Why this maps. The JD asks for portfolio scale + multi-platform operator depth + CAC/LTV economics + executive-facing cadence. Each was the daily shape of this seat for 14 months.

\$1.4M

aggregate annual book

\$15K-\$90K

per-client monthly budget range

3x ROAS

via holdout incrementality (D2C beauty)

-50%

book churn (LTV-focused strategy)

Three concrete experiments to ship inside thirty days.

Each one ships in a month and produces a measurable economic outcome - CAC, LTV, payback period, or attribution coverage.

WEEK 1-2 - ATTRIBUTION AUDIT

End-to-end attribution audit and gap teardown

Map current state: GA4 event coverage, GTM container hygiene, Meta CAPI / server-side parity, Salesforce / CRM lead-routing, UTM spec compliance. Output a 2-page teardown ranking gaps by revenue impact and a sequenced fix-it roadmap.

Why first. Same shape as the Plug Power rebuild. Without trustworthy data, every paid decision later is theater. Fix the contract first.

WEEK 2-4 - HOLDOUT TEST

Holdout-incrementality slice on the largest spend channel

Identify the channel currently getting the most credit on last-click or last-touch. Carve a matched holdout cell. Measure incremental conversion lift over 3 weeks. Cut over-credited spend, reallocate to true lift. Defend the call with finance + leadership.

Why first. The Pixis muscle. On regulated / high-consideration buyers, last-click attribution under-credits long consideration cycles and over-credits closing-window channels. Holdout incrementality is the only way to see the true picture.

WEEK 3-4 - ECONOMICS DASHBOARD

CAC / LTV / Payback dashboard for weekly + monthly cadence

Build a one-page dashboard tracking CAC, LTV, ROAS, payback period, and cost per conversion sliced by channel + cohort. Looker Studio or Tableau on the data layer. Becomes the artifact that anchors the weekly performance update and the monthly business review.

Why first. Same shape as the \$627M margin-recovery executive dashboard at Sensata (1,200 opportunities, 3 regions, 4 product families). Executive artifact, built for decisions.

What I'd want from the first fifteen minutes.

What I'd want to understand: whether this is an internal IntelliPro seat or a client placement (and if client, which vertical); how the data-layer + attribution stack looks today; and which channel currently carries the most measurement uncertainty.

What I'd bring: a draft attribution-audit outline scoped to a typical fintech / insurance / healthcare paid-stack shape, a holdout-incrementality design ready to scope, and a one-page CAC / LTV / payback dashboard wireframe.

Remote works. Open to hybrid if the role is on-site.

15 min with the team

or written async if that's easier
