

CONTENT MARKETING MANAGER | SAMPLE WORK

Writer for technical buyers.

Four years writing for engineers, distributors, and CFOs. Plus an AI job-matching product I shipped solo, and the SEO + AEO + GEO craft that wins the AI-engine citation. Five slides of evidence, one closing pitch.

Interviews in. Assets out. Win rates up.

"Conduct customer interviews to develop compelling narratives." Juicebox sells to recruiters who have read every "AI is changing recruiting" piece. Operator-grade specificity wins them. That requires the customer-interview-to-asset pipeline.

CUSTOMER INTERVIEWS

30+

OEMs and distributors at Sensata

REPS USING THE LIBRARY

CONVERSION LIFT ON COPY REWRITE

+15%

positioning informed by interviews

THE PIPELINE | FROM INTERVIEW TO PUBLISHED ASSET

Method: Recorded interviews go to themes plus an objections bank plus a proof-quote bank. Brand voice documented before distributor-branded variants ship. Win rate and CSAT measured at the asset level so the team knows which themes actually move pipeline.

+8% market share

+12% YoY revenue

Built for AI-engine citation, not just SERP.

"Position SEO as a major customer acquisition driver." The acquisition channel that compounds in 2026 is the answer-engine surface (ChatGPT, Claude, Perplexity). The content has to be structured to be quoted, not just ranked.

REAL GEO AUDIT DONE

KKR

2-page teardown, attached separately

CONTENT CLUSTER | HUB-AND-SPOKE FOR AI-ENGINE ANSWERABILITY

AI-ENGINE CITATION AUDIT (REAL, KKR)

QUERY	ENGINE	CITED
"Top PE firms infrastructure 2026"	ChatGPT	No
"Top PE firms infrastructure 2026"	Perplexity	Partial
"Best PE for healthcare"	Claude	Narrow framing
"KKR AUM 2026"	ChatGPT	\$553B / \$664B / \$700B / \$744B
"PEI 300 winners"	Perplexity	Buried

THE 60-DAY FIX

- **Source-page consolidation** for the AUM citation drift
- **FAQ cluster** on infrastructure track-record + healthcare scope
- **Comparison page** ("KKR vs Carlyle for healthcare") quotable in 1-2 sentences
- **Schema + structured Q&A** on every cluster page

The audit method works on any company. I keep a 2-page version of this teardown attached as a sample. The same method maps cleanly to Juicebox querying "best AI sourcing tool" or "PeopleGPT vs LinkedIn Recruiter."

AI is how I write, not what I write about.

Juicebox sells AI productivity to skeptical buyers. The content marketing manager has to use AI in their own writing workflow before claiming it for the buyer. I do, daily.

PIXIS: TRAINED 8 ENTERPRISE MARKETERS ON AI TOOLS

Translated AI bidding methodology and creative-variant performance into outcomes a CFO could sign off on. Same translation muscle Juicebox needs for the recruiter buyer who has been pitched ten AI tools this quarter.

The point: Recruiters can tell the difference between a writer who uses AI and one who treats it as a side project. AI is how I write, not what I write about.

Shipped an AI job-matching product. Lived in the forums.

Juicebox's buyer is the recruiter. The candidate-side and the recruiter-side share more narrative than the deck makes it look. I lived inside both for a year.

Product update emails

Weekly cadence to a 50+ user list, retention measured

[Email](#)

Hacker News observation

24 to 72 hour lag behind Reddit on AI-hiring narratives

[HN](#)

Why this matters for Juicebox. The recruiter who buys PeopleGPT is the same person who hires the candidate I wrote SwipeHire for. The narratives are intertwined. Knowing both sides is unusual on a content marketing CV.

The closing pitch.

PeopleGPT, YC S22, \$116M raised, 3,000+ customers, on path to \$100M ARR. The content marketing manager has to write for a recruiter audience who has been pitched ten ZoomInfo alternatives this quarter, and use AI tools faster than the buyer can.

CUSTOMER-STORY PIPELINE

Sensata 30+ interviews → positioning rewrite + sales enablement library for 50+ reps. +30% win rate.

SEO + AEO + GEO

Plug Power on-page + technical SEO + content cluster + FAQ pages structured for ChatGPT / Claude / Perplexity citation.

AI-NATIVE WRITING

4 Claude certifications + SwipeHire on OpenAI API + Pixis AI training. Prompt-based iteration as default.

RECRUITING-ADJACENT FLUENCY

SwipeHire AI job-matching shipped solo. Lived in r/careerquestions and r/h1b for a year.

Why Juicebox, specifically

The buyer Juicebox sells to is one I have written for and to. SwipeHire was an AI product for the candidate side; the recruiter is the person hiring that candidate. Plus the AEO and GEO craft your JD names is exactly the work I have done at Plug Power. Profound is a week-one ramp; the audit method is the work I have already built.

Why this role, specifically

Content marketing for a 20%-monthly-growth AI SaaS is the rare role where every asset compounds. The team that wins is the one with a customer-story pipeline that runs weekly, an AEO/GEO discipline that gets cited by ChatGPT, and a writer who has actually shipped an AI product. That combination is unusual on a single CV. Worth 30 minutes.
