Hiring Team, NanoNets

NanoNets is selling AI document automation to F500 finance, healthcare, and supply chain buyers, with revenue tripling YoY and a Series B led by Accel. The PMM has to write about LLM extraction, computer vision, and workflow integration in language that a CFO trusts and a sales engineer can defend in a procurement room. I have spent four years doing exactly that work in the adjacent shape - industrial sensors, AI marketing platforms, and a D2C marketplace - and I happen to ship AI products on the same model class your buyers evaluate.

At Sensata I own positioning and messaging for industrial sensor product lines and led cross-border GTM across NA, EU, and three regions, generating **\$2M+ first-year pipeline and +35% qualified leads**. The work I am proudest of: 30+ structured interviews with OEMs and distributors that I turned into a sales enablement library (decks, case studies, battlecards, ROI narratives, objection handling) used by **50+ reps** and tied to a **+30% lift in win rates**. That same loop - customer interview into proof point into landing-page copy into sales narrative - is what your PMM owns on the AI doc-extraction side.

On landing pages, attribution, and lifecycle, Plug Power is the proof. I rebuilt the MarTech function from zero on Salesforce, Adobe Analytics, GA4, and GTM: UTM spec written from scratch, landing-page A/B testing on keyword and creative variants, HubSpot lifecycle with drip and MQL nurture, Adobe Audience Manager segmentation, LinkedIn ABM layered on top. CPA fell **25%**, conversion rose **20%**, and the loop from ad click to Sales-Qualified Lead got traced and proven end to end. That is the same conversion + bounce + demo-rate operating model the NanoNets PMM is measured on.

On AI-tool fluency, the differentiator: 4 Anthropic Claude certifications (Claude 101, Claude Code 101, Claude Cowork, Building with Claude API), two production AI products shipped solo (**SwipeHire**, a Python + OpenAI + React job-matching platform with 50+ users, +25% activation, 8 A/B tests with significance gates defined up front; **NSE Bot**, a Python + Claude API technical-indicator scanner with an agentic reasoning layer for news catalysts), and a Cursor + Claude daily workflow with a draft-and-critique pipeline that I have productized for **8x copy velocity**. At Pixis I trained **8 enterprise marketers** on the AI bidding + creative-automation platform - same product category Smartly, Hunch, and Omneky compete in - so I have run the buyer side of this category in a hands-on training role.

Palo Alto two days a week works. Open to relocation from Boston. Full proof trail at adhithyabhaskar.vercel.app/ref/nanonets.
