

PITCH DECK | PRODUCT MARKETING MANAGER | NANONETS

F500 buyers expect a PMM who writes about AI like they buy it.

Positioning, sales enablement, and customer-story pipelines for an AI doc-extraction company.

Sensata - \$2M+ first-year pipeline + 50-rep sales enablement (+30% win rate)

30+ customer interviews to positioning + content + battlecards

Plug Power - MarTech rebuilt from zero (-25% CPA, +20% conversion)

SwipeHire - AI product shipped solo on Python + OpenAI + React

4 Anthropic Claude Certifications + Cursor daily

What NanoNets is asking for - and where the proof sits.

JD Themes

"Landing pages - primary owner, messaging, positioning, proof points, CTAs."

"Sales collateral - decks, one-pagers, battlecards, ROI/value narratives."

"Source, shape, publish customer testimonials + case studies."

"Coordinate launches with product, sales, growth - announce, enable, measure."

My Proof

Plug Power MarTech rebuilt from zero on Salesforce + Adobe + GA4 + GTM: UTM spec, LP testing, -25% CPA, +20% conversion. The landing-page + attribution + lifecycle muscle, end to end.

Sensata sales enablement library for 50+ reps - decks, case studies, battlecards, ROI narratives, objection handling - tied to **+30% lift in win rates**.

30+ structured customer interviews with OEMs + distributors converted into positioning rewrites, content themes, and CRO experiments (+22% CSAT).

Cross-border GTM across NA + EU + 3 regions for new sensing product lines: **+35% qualified leads, \$2M+ first-year pipeline**.

Sensata: the customer-insight to content to win rate loop.

PMM at NanoNets owns the same loop on AI doc-extraction. I have been running it on industrial sensors for 18 months.

30+

Customer Interviews

Structured VOC with OEMs + distributors across NA/EU. Translated into product enhancements, CRO experiments, positioning rewrites, content themes.

50+

Reps Enabled

Sales enablement library shipped end-to-end: decks, case studies, battlecards, ROI narratives, objection handling, competitive teardowns.

+30%

Win Rate Lift

Tied directly to the sales enablement library + competitive battlecards on 10+ players + pricing/feature gap analysis (+8% market share).

\$2M+ first-year pipeline + +35% qualified leads on cross-border GTM. 100+ feature backlog managed with engineering in Agile (release cycles up 25%, TTM down 20%).

The PMM differentiator: I ship AI products on the model class your buyers evaluate.

Built + Shipped

SwipeHire - AI job-matching platform on Python + OpenAI API + React. 50+ early users, +25% activation V1 to V2, 8 A/B tests with significance gates defined up front, GA4 + GTM instrumented from day one.

NSE Paper-Trading Bot - Python-based stock scanner using live NSE data with technical-indicator pipeline and AI-enhanced reasoning layer (Claude API) for news/catalyst analysis.

Pixis AI-Platform Trainer - trained 8 enterprise marketers on AI bidding + creative-automation (Smartly/Hunch/Omneky category) end-to-end, including registration, talk tracks, and follow-up.

Certifications + Workflow

4 Anthropic Claude Certifications: Claude 101, Claude Code 101, Claude Cowork, Building with Claude API.

Cursor + Claude daily workflow with a draft-and-critique pipeline productized for **8x copy velocity** on launch content, sales decks, and case studies.

When NanoNets buyers ask the PMM "how does this LLM extraction actually work and what is the failure mode at scale?" - that conversation gets credible answers, not hand-waving.

What the first month looks like.

WEEK 1

Listen + Audit

Sit with 3 AEs on live calls. Read win/loss notes for the last 90 days. Audit current landing pages, sales decks, battlecards, case studies. Map what exists vs what is JD-named (decks, one-pagers, battlecards, ROI narratives).

Why first: PMM at a Series B that just tripled YoY has gaps. Find them before writing.

WEEK 2-3

Customer Voice + Test

Run 6 structured customer interviews across F500 finance + healthcare + supply chain segments. Convert quotes into 2 positioning hypotheses + 1 landing-page A/B test on the highest-traffic product page.

Why now: The Sensata loop - VOC into content into measurable conversion lift - works on AI doc-extraction the same way it works on industrial sensors.

WEEK 4

Ship + Measure

Ship 1 customer case study (written + 60-sec video), 1 battlecard against the top-named competitor, 1 sales one-pager for the segment with the longest cycle time. Instrument tracking on each. Report results to leadership.

Why this fast: The bar at a profitable Series B is shipped, measured, iterated. Not perfect.

CLOSE

Profitable Series B + AI-doc-extraction + PMM-pure JD. The fit is unusually clean.

You need a PMM who can own landing pages + sales enablement + customer stories on a product the buyer needs explained credibly. I have run that exact loop for 18 months at Sensata (\$2M+ first-year pipeline, +30% win rate across 50 reps) and rebuilt the MarTech + landing-page + attribution stack from zero at Plug Power (-25% CPA, +20% conversion).

The differentiator is the AI builder credential - **2 production AI products shipped solo + 4 Claude certifications + Pixis AI-platform trainer for 8 enterprise marketers**. NanoNets sells AI doc extraction; the PMM should know what it feels like to ship and instrument an LLM product end to end. I do.

Palo Alto two days a week works. Open to relocating from Boston.
