

PITCH DECK | GROWTH MARKETING MANAGER, NEWFORM

Agency book + AI-agent product. On one resume.

Pixis at \$1.4M was the closest analog to what you do. SwipeHire is the closest analog to what WillBot is.

\$1.4M 8-client agency book at Pixis

iOS UA via Appsflyer + Adjust on the book

SwipeHire - AI product shipped solo, WillBot analog

3x ROAS beauty-brand attribution restructure

4 Anthropic Claude Certifications

Pixis was your shape, smaller. **SwipeHire is WillBot, smaller.**

Most application decks pitch capability. This one names the two products on my CV that map structurally to what Newform sells: an agency book at multi-client scale, and an AI-agent product on top.

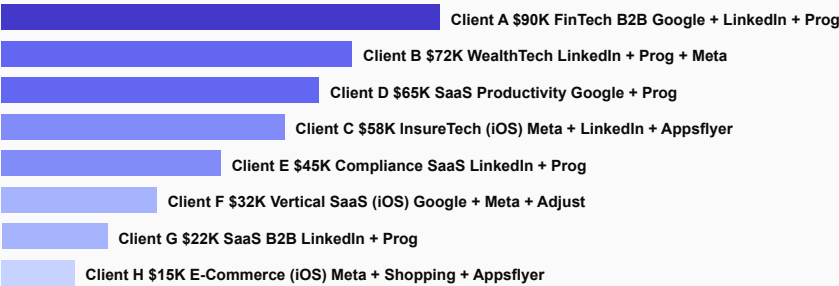

DIMENSION	Newform (yours)	Pixis + SwipeHire (mine)
AGENCY SHAPE	~\$100M annual managed spend; tech/mobile/consumer brand book; in-house creative + media team.	Pixis 8-client B2B SaaS portfolio; \$1.4M aggregate book ; per-client \$15K-\$90K monthly; 8-person team across creative + account + platform.
PLATFORMS OWNED	Meta, TikTok, Google primary. Mobile-app focused.	Meta + Google + LinkedIn + Criteo + Amazon + programmatic. iOS app paid UA via Appsflyer + Adjust on the book.
CLIENT RELATIONSHIP	Lead client relationships and oversee media investments. Quarterly business reviews.	Weekly client CFO QBRs translating analytics into procurement-ready outcomes. Replaced two channels mid-quarter when KPIs slipped.
AI-AGENT PRODUCT	WillBot - AI performance marketing agent.	SwipeHire - AI matching product on Python + OpenAI API + React, shipped solo. 50 users, 8 A/B tests, +25% activation. Deterministic input + LLM reasoning + measured user outcome - same shape as WillBot.
ATTRIBUTION MUSCLE	Drive efficient growth across paid channels.	3x ROAS lift on a beauty client at Pixis via holdout-incrementality restructure; -25% CPA at Plug Power via closed-loop attribution rebuilt on Salesforce + Adobe + GA4 + GTM from zero.

AI FLUENCY	Sell AI-agent productivity to brand clients.	4 Anthropic Claude certifications + Cursor as daily workflow. Trained 8 enterprise marketers on AI
------------	--	--

\$1.4M aggregate book. 8 clients. iOS UA on the book.

Pixis is the closest agency-shape on any candidate's CV you'll see. Below: the per-client breakdown, the channel mix, and the iOS UA layer that maps directly to Newform's mobile brand book.

8-CLIENT BOOK | \$1.4M AGGREGATE

iOS APP PAID UA LAYER

Appsflyer + Adjust on three clients in the book

SKAN configuration | Post-IDFA conversion-event windows | SKAdNetwork campaign structure | View-through deduplication

CADENCE

Weekly client CFO QBR, one per client. Same week I'd present ROI, iROAS, the next-sprint plan, and the on-the-fly channel swap when blended numbers hid the truth (mid-quarter pivot on Client C and F).
Trained 8 enterprise marketers across the book on Pixis's AI bidding and creative tools as part of those QBRs.

WHY THIS IS THE AGENCY-SIDE PROOF

*Newform runs a book at \$100M; I ran one at \$1.4M. **The shape is the same:** multi-client portfolio, per-client P&Ls, weekly QBR cadence, an 8-person team across creative + account + platform.*

The iOS UA layer via Appsflyer and Adjust is the unusual one - most multi-channel growth marketers haven't actually configured SKAN windows or post-IDFA conversion events. I have.

\$1.4M

Aggregate book

8

Clients in parallel

8-person

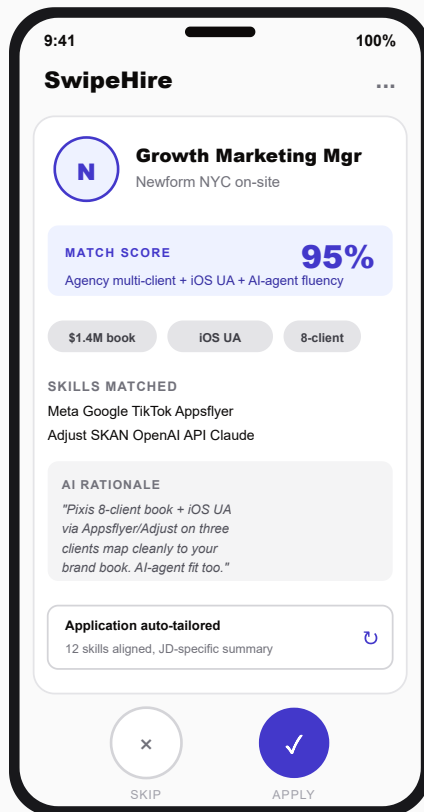

Team across pods

3x ROAS

Beauty-client lift (1mo)

I built the AI-agent shape **solo, end-to-end.**

WillBot is an AI agent for performance marketing. SwipeHire is an AI agent for career matching. Different verticals. Same architecture pattern: deterministic input layer + LLM reasoning + measured user outcome on a tight feedback loop. Here is what I shipped.

The architecture, layer by layer

- 01 Deterministic input layer.** Resume parser on the OpenAI API, structured JSON output, skill normalization on a controlled taxonomy. Same shape as WillBot's media-buy input rules.
- 02 LLM reasoning layer.** LLM-scored JD-to-resume fit on top of deterministic overlap; LLM reasons, doesn't replace, the score. Mirrors WillBot reasoning over channel + audience + creative data.
- 03 Action layer.** One-tap apply with a CV auto-tailored to the JD - 12 skill alignments, JD-specific summary, generated server-side. WillBot's action layer would be the bid + creative variant push.
- 04 Instrumentation.** GA4 + GTM + Amplitude wired day one. Custom events on every step in the funnel. **50 users, 8 A/B tests, +25% activation lift V1 to V2, weekly cohort retention.**
- 05 Eval loop.** Weekly review of LLM rationale outputs against measured user behavior. Prompt iteration as a daily ritual, run in Cursor + Claude.

Why this matters for Newform

Most growth-marketing applicants have *used* AI tools. Few have **built and shipped an AI product solo end-to-end**. The credibility to talk about WillBot with clients comes from having shipped the shape yourself.

Three things I'd ship in the first thirty days at Newform.

Concrete, not aspirational. Scoped to where I'd start day one given the JD's emphasis on agency-side scaling + iOS app focus + AI-agent product DNA.

SHIP 1 - CLIENT ACCOUNT AUDIT

Diagnose one mobile-app client end-to-end

Take the most complex mobile-app account in the book. Audit channel mix, creative cadence, SKAN configuration, post-IDFA conversion-event windows, and attribution model. Output: a 2-page client memo + a next-sprint plan with three named experiments.

Why first. The fastest way to earn trust on a multi-client agency book is to show up to week-one with a real diagnosis. Pixis Client C/F shape - mid-quarter channel swaps when blended numbers hid the truth - is the muscle I'd bring.

SHIP 2 - LIFT STUDY CADENCE

A quarterly holdout-incrementality template

Build a shared template so every client account runs at least one holdout-incrementality experiment per quarter. Sample-size and significance gates defined up front; outcomes documented in a client-facing one-pager. Standardize the language so all account leads can deliver it.

Why first. The Pixis beauty-client 3x ROAS win wasn't a creative breakthrough - it was reading the numbers honestly. Productizing that diagnostic across the book is the highest-leverage thing an agency-side growth IC can do.

SHIP 3 - WILLBOT EVAL LOOP

Internal-team WillBot benchmarking pass

Run WillBot on three sample client accounts (sanitized) and compare its recommendations against what a senior media buyer would actually do. Identify where WillBot wins (speed, recall), where it loses (context, judgment), and what prompts/inputs would close the gap.

Why first. The product-DNA fluency comes from putting WillBot through its paces, not from talking about it. SwipeHire's weekly eval-loop discipline transfers directly.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: how the team currently splits AE responsibility between new-client acquisition and scaling the existing book; which of the three week-one ships would die first inside Newform's stack and why; and where WillBot sits today between "internal team accelerant" and "client-facing product."

What I'd bring: a one-pager on how I'd structure the first 90 days, a draft client account audit scoped to a sanitized version of one of Newform's brands, and an honest take on where Pixis's playbook would transfer cleanly versus where Newform's iOS-app book would need a different mechanic.

NYC works; open to relocating from Boston. Boston-NYC commute is feasible during a transition.

15 min with the Newform team

or written async if that's easier on your week
