

I built this in 90 minutes because I couldn't stop thinking about **your CKE** **category bet.**

A 90-day playbook for paid social at Otter. Channel audit, creative-led growth, AI-native experimentation. Built so you can skim instead of scroll.

Three growth-marketing problems unique to the CKE bet

Otter is asking buyers to adopt a category they don't yet have a search term for. That changes how paid social has to work.

PROBLEM 01

Category creation, not category capture.

Buyers won't search "Conversational Knowledge Engine" tomorrow. Paid social has to do double duty: build the category narrative AND capture the demand it creates. Most teams pick one.

My answer: pair a category-narrative content layer (LinkedIn + X) with retargeting that converts the surface area into demos.

PROBLEM 02

Creative velocity is the moat.

Meta, YouTube, TikTok all reward variant volume. Most teams ship 5 creatives a week. AI-native teams ship 50. The work isn't creative production - it is creative briefing, judging, and shipping at speed.

My answer: a weekly creative review cadence with AI-generated variants from a small library of proven hooks.

PROBLEM 03

AI products need AI-native systems.

pLTV-weighted bidding, generative variant testing, agentic experiment briefing. The metrics stack (cohort retention, paid-to-paid LTV) has to keep up with the channel mix.

My answer: an experiment system measured in tests-shipped-per-dollar, not tests-shipped-per-quarter.

Reality check: I have not seen Otter's actual paid stack. These are my reads from the JD, the Forbes 2026 mention, and three weeks watching your category-creation content. Happy to revise once we talk.

My first 90 days at Otter

Concrete, not aspirational. Each milestone is something I have done before, mapped to where Otter likely sits today.

DAYS 1-30

Audit and instrument

- Channel-level audit on Meta, YouTube, TikTok. Pull last-90 spend, CPA, MQL/SQL ratios by creative and audience.
- Stand up incrementality holdout structure for Meta + TikTok (have done this twice).
- Ship first 8 creative variants on the top-funnel mover. Document the hook-claim-CTA framework.
- Map cohort retention to acquisition source. Surface 1 surprise to Zaw within 14 days.

DAYS 31-60

Test and scale

- pLTV-weighted bidding pilot on Meta + TikTok. Reweight spend by predicted retention, not just CPA.
- Launch the category-narrative content layer (LinkedIn + X founder-led) to feed retargeting and brand-lift.
- First spend-shift recommendation to channel mix. Defensible model on Power BI or Sheets.
- Ship 20+ creatives across the period. Weekly creative review cadence operational.

DAYS 61-90

Compound and automate

- Brand-lift study scoped and running on a top-3 channel.
- Pipeline-attributed reporting live with paid-to-paid LTV by channel and creative theme.
- Automate briefing, variant generation, and reporting into an AI-driven workflow. Free 8 hours/week.
- Hand Zaw a 6-month spend plan with explicit experiment bets, not just channel splits.

! **The bet I would make on day 1:** creative velocity. If we ship 50 variants/week instead of 5, the algo learns faster and CPA compounds down. The rest of the plan stays the same; this is the lever I would defend hardest.

The receipts

Every claim on the prior slide has a parallel in something I have already done.

PLUG POWER · DIGITAL MARKETING MANAGER

Multi-channel paid + closed-loop attribution

-25%

CPA

+20%

Conversion

4

MarTech vendors
aligned

Rebuilt the stack on HubSpot + Salesforce + Adobe + GA4 + GTM. Closed-loop from ad click to SQL to revenue. Same attribution rigor needed to defend Otter's paid-to-paid LTV thesis.

GENY MEDIUM · SR. DIGITAL MARKETING ANALYST

D2C consumer paid at scale

16x

ROAS

+36%

Conversion

+25%

CAC rate

Google Merchant + Meta catalog rebuild, dynamic product ads, audience segmentation. Win/loss interviews fed back into creative briefs. Same playbook applies to Otter's prosumer acquisition.

PIXIS · CUSTOMER SUCCESS MANAGER (AI MARTECH)

8-client paid portfolio, AI-driven bidding

\$15K-\$90K

Monthly spend / client

-50%

Churn

8

Clients

Ran a multi-client paid portfolio with weekly QBRs. iOS UA on Appsflyer + Adjust. Validated 3x ROAS lift via holdout incrementality. Cohort LTV + retention playbooks where Otter is headed.

SWIPEHIRE · FOUNDER (AI PRODUCT, SIDE PROJECT)

0-to-1 AI product, organic-led

60%

Organic signups

8+

A/B tests shipped

\$0

Paid spend

Built end-to-end on Python + React + AI APIs. Full funnel on GA4 + GTM + Amplitude with cohort retention analysis. Founder-led LinkedIn + X content compounded into a free distribution engine. AI builder fluency.

Why us together

One slide on what excites me about Otter specifically, then I will get out of the way.

What I would want to know more about **on call 1**

- How do you measure paid-to-paid LTV today? Is there a cohort attribution layer separating prosumer from team conversions?
- What is the current creative cadence on Meta and TikTok? Where does new variant briefing get bottlenecked?
- Has the team scoped a brand-lift study on the CKE positioning? Asking because I would want to push for one early.
- Where does Otter's existing organic content team and paid acquisition meet? Do briefs get co-authored?

What I bring that I think is rare

A pricing-and-margin operator at Sensata, a multi-channel performance marketer at Plug Power and GenY, an AI product builder via SwipeHire, all under one resume. Most growth folks have one or two of those. I run my own product on the side because I cannot stop building.

MS Marketing Analytics, Simon Business School. Pricing Policies + Advanced Pricing TA. Advanced Pricing Certified.

Let's talk - 20 minutes. I will come ready with a sharper read once I see the actual stack.
