What Plaud Hires For, What I Have Already Built

Plaud JD

- Onboarding, engagement, retention, reactivation across email, push, in-app
- Behavioral segmentation and user-signal-driven journey design
- Cohort trends and experiment-result analysis
- B2C and B2B lifecycle programs in parallel
- Cross-functional with product and data on launches
- AI-product fluency in a category that lives or dies on activation

What I Have Already Run

30+

User-discovery interviews
shaped ICP

4

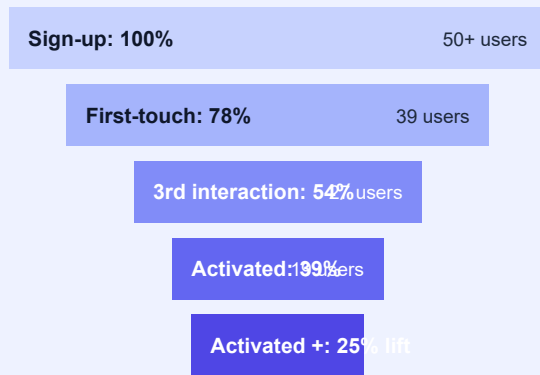

Anthropic Claude certifications

- Solo-built B2C AI product on Python + OpenAI API + React
- HubSpot lifecycle, Adobe Audience Manager segmentation, Amplitude cohort analysis
- Pixis 8-client B2B SaaS book with renewal-aligned playbooks

SwipeHire: Consumer AI Activation, End-to-End

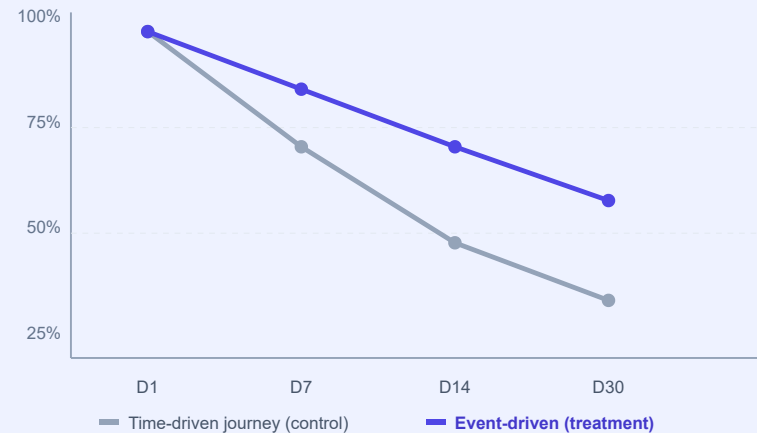

Solo build on Python, OpenAI API, and React. ICP defined from a 30-conversation user discovery. GA4 + GTM event tracking and Amplitude cohort analysis instrumented from day one. Same product shape as Plaud at smaller scale.

Activation Funnel (8 A/B Tests)

After 8 A/B tests on third-interaction step

Cohort Retention by Onboarding Variant

The seam I held. Activation craters at the third meaningful interaction because most journeys treat the buyer as already familiar with what the product can do. The fix: event-driven onboarding mapped to behavioral cohorts, not calendar buckets. Same seam Plaud holds against. Same fix.

Plug Power Lifecycle Build + Pixis Renewal Playbooks

The JD calls for both B2C and B2B lifecycle programs. Most candidates skew one way. Below, the two programs that prove the B2B half of the mandate.

PLUG POWER

HubSpot Lifecycle Build

- Drip sequences and MQL nurture across account-level behavioral segmentation
- Retargeting funnels and suppression lists in Adobe Audience Manager
- Closed-loop attribution from ad click to SQL on Salesforce, Adobe, GA4, GTM
- UTM spec written from scratch, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution
- 4-vendor MarTech RFP coordinating 6 internal stakeholders

-25% CPA, +20% conversion, MQL-to-SQL lift

PIXIS

8-Client Renewal-Aligned Playbooks

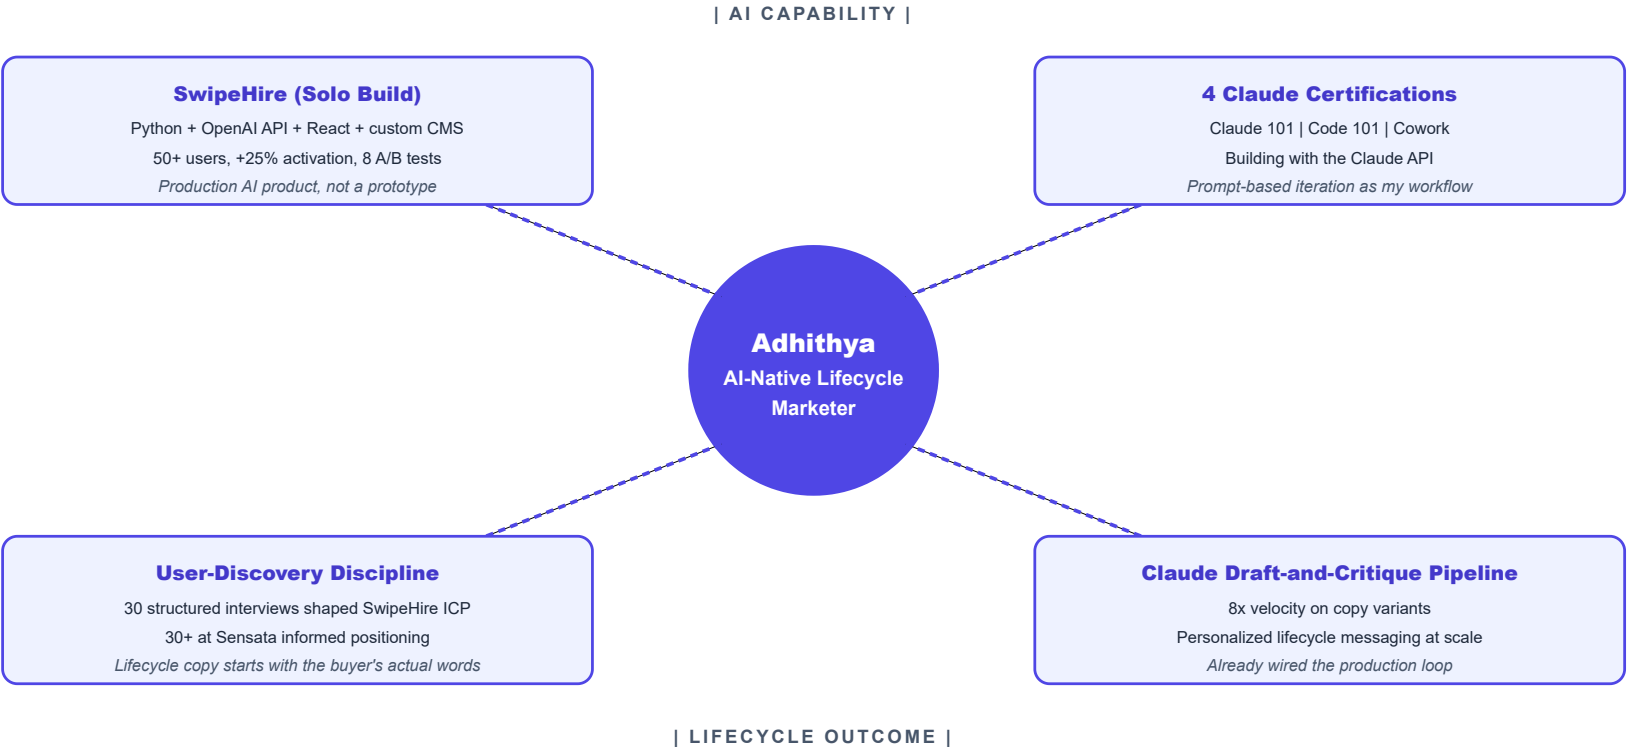

- 8-client B2B SaaS portfolio, per-client monthly budgets ranging \$15K to \$90K
- 8-person team across creative, account management, platform specialists
- Per-client renewal-aligned playbooks documented in writing
- Trained 8 enterprise marketers on AI bidding tools as part of weekly QBRs
- Replaced two underperforming channels mid-quarter when KPIs slipped

Cut client churn 50%, validated 3x ROAS via holdout incrementality

Why this matters for Plaud. The B2B half of Plaud's customer base (enterprise note-taking buyers, IT-driven rollouts) needs a different lifecycle architecture than the B2C half. Most lifecycle hires can run one of these programs cleanly. I have shipped both.

Built One AI Product Solo, Certified on Four Claude Tracks

Plaud is a consumer AI product. The lifecycle marketer who ships fastest is the one who already speaks the AI-product vocabulary, has wired prompt-based iteration into a real workflow, and treats AI-driven personalization as default architecture rather than feature add.

15 Minutes With the Hiring Team

What I would want to understand: which lifecycle stage is currently bleeding the most users (post-install activation, day-7 retention, or feature-adoption), how the B2B-side journey gets routed differently from the B2C-side, and what the first 90-day operating cadence looks like for a Senior Specialist on the lifecycle team.

What I would bring to the conversation: a one-page proposal for the first three lifecycle experiments I would run in week two, a draft cohort dashboard structure tied to onboarding-stage signals, and a quick read on which AI-driven personalization plays would compound fastest given Plaud's product surface.

SF works. Open to relocating from Boston.
