

PITCH DECK | BUILDER - PRODUCT MARKETING LEAD | REEVO

I started building the same argument Reevo is built on. In May, by accident.

Positioning, GTM, and sales enablement from someone who ships inside the revenue stack, not just about it.

PriceKeel - founder of a decision-integrity layer for B2B SaaS deal pricing

Sensata - 50-rep enablement system, +30% win rate

\$2M+ first-year revenue on cross-border GTM, +35% qualified leads

Pixis - drove AI-platform adoption inside 8 enterprise revenue teams

Plug Power - web and MarTech rebuilt from zero (-25% CPA, +20% conversion)

4 Anthropic Claude certifications, Claude and Cursor daily

Adhithya Rokhith Bhaskar

Two products, **one thesis**: the revenue stack should remember what actually closed.

What Reevo is building

An **AI-native revenue operating system** that replaces the static CRM. It generates its own clean first-party activity data instead of waiting for reps to log it.

It **guides reps to the next best action** rather than storing a record after the fact.

It unifies marketing, sales, and CS on one surface so the handoffs stop losing context.

What I started building in May

PriceKeel, a decision-integrity layer for B2B SaaS deal pricing. It reads a live discount exception inside the deal platform.

It **recommends an explainable guardrail** learned from that company's own closed-won and closed-lost history.

It records the human decision with **evidence Finance can audit**. A margin layer is the next build.

The overlap is not the feature set. It is the conviction that a revenue system earns trust by learning from real outcomes and showing its work at the moment a human has to decide. That is also the hardest thing to write copy about, and it is what this role owns.

What Reevo is asking for, and where the proof sits.

JD Themes

"Define clear, differentiated positioning that turns complex AI-driven features into sharp customer value."

"Lead GTM planning from ideation through adoption. Create market moments, drive pipeline."

"Equip Sales with pitches, demo narratives, and competitive battlecards. Increase win rates and deal velocity."

"Own product storytelling across the website and key growth surfaces. Optimize for conversion and clarity."

"Diagnose and optimize a revenue funnel. Build repeatable playbooks. Leverage AI tools to amplify impact."

My Proof

Sensata positioning ownership on industrial sensor lines: dense technical specs turned into value propositions that lifted conversion **15%**. Complex-to-clear is the whole job there.

End-to-end GTM across NA and EU: narrative, launch content, and enablement sequenced into **\$2M+ first-year revenue, +35% qualified leads, 12% YoY** growth.

Enablement system for 50+ reps - pitch decks, demo narratives, battlecards, ROI narratives, objection handling - tied to a **+30% win-rate lift**, backed by teardowns on **10+ competitors** (+8% share).

Plug Power web and MarTech rebuilt from zero on Salesforce, Adobe, GA4, GTM: UTM spec, landing-page architecture, CTA testing. **-25% CPA, +20% conversion**.

Funnel diagnosis is the day job at PriceKeel, plus **4 Claude certifications** and production work on the Claude and OpenAI APIs.

Sensata: the **customer insight to enablement to win rate loop**, run for two years.

The JD calls this "ideation through adoption." At Sensata nothing shipped unless a rep could carry the story into the room and win with it.

30+

Customer Interviews

Structured voice-of-customer with OEMs and distributors, paired with SQL and GA4 usage data across 50,000+ devices. Fed a 100+ feature backlog with engineering: feature adoption up 18%, time-to-market down 20%.

50+

Reps Enabled

A system, not a folder of one-offs: pitch decks, demo narratives, battlecards, ROI narratives, objection handling, competitive teardowns on 10+ players. Built to survive headcount doubling.

+30%

Win Rate Lift

The measurable end of the loop. Pricing and feature gaps surfaced in the teardowns fed the battlecards, which fed +8% market share on the contested lines.

Before that, at Pixis, I drove adoption of an AI decisioning platform inside **8 enterprise revenue teams** and cut book churn **50%**. That is where I learned the objection this role has to answer in writing: reps do not reject AI recommendations because they are wrong, they reject them because nobody showed the work.

What the first month looks like.

WEEK 1

Sit in the deals

Live calls with AEs. Read every closed-won and closed-lost note from the last 90 days. Audit what exists today against what the JD names: pitch, demo narrative, battlecards, website product story. Write down the exact words customers use for the problem, not the words we use.

Why first: A company that raised \$80M and is scaling fast has narrative drift between the website, the deck, and what reps actually say. Find the gap before writing a word.

WEEK 2-3

Sharpen the wedge

Run 6 structured customer interviews across the core ICP. Turn them into two competing positioning hypotheses for the AI-native-versus-static-CRM wedge, then pressure-test both against Sales and Product. Ship one rewrite of the highest-traffic product page with conversion instrumented.

Why now: This is the same loop that produced +30% win rates at Sensata. Interviews into positioning into a measurable surface, not a deck that sits in Notion.

WEEK 4

Ship the system

Deliver a battlecard against the top-named competitor, one demo narrative rebuilt around the next-best-action moment, and a launch playbook template that holds up when the team doubles. Report what moved and what did not to leadership.

Why this fast: The JD asks for repeatable systems and AI-assisted throughput. Best way to prove both is to have shipped a reusable one inside a month.

CLOSE

You are hiring a builder to market a builder's product. That is the whole pitch.

The core PMM work is proven: positioning ownership that lifted conversion **15%**, a 50-rep enablement system behind a **+30% win-rate lift**, end-to-end GTM worth **\$2M+ in first-year revenue**, and a web and MarTech stack rebuilt from zero for **-25% CPA and +20% conversion**.

What is harder to hire for is someone who has spent the last four months building a product that sits in the same seam Reevo does, arguing with the same objections, writing the same explainability story for their own buyers. **I am doing that at PriceKeel right now**, which means the category is not something I would need a quarter to internalize.

Five days a week in San Francisco or Santa Clara works, and I am ready to relocate from Boston for it.
