Hiring Team, Sonatype,

The Performance Marketing Manager role at Sonatype lines up directly with the work I have been running for four years: paid acquisition into **technical B2B buyers**. Sonatype sells software supply chain and DevOps tooling to engineering and security leaders. That audience profile - skeptical, technically deep, evidence-driven - is the same one I sell into today at Sensata (industrial OEMs, distributors, engineering decision-makers) and the same one I built paid programs for at Plug Power.

Direct evidence of fit:

- **Plug Power multi-channel paid for technical B2B:** Rebuilt the full paid acquisition stack on **HubSpot + Salesforce + Adobe Analytics + GA4** with **closed-loop attribution** from ad click to SQL. **-25% CPA, +20% conversion** across paid search, LinkedIn, Meta, programmatic, and display.
- **AEO/GEO at Plug Power (AI-driven buyer search visibility):** Designed and launched a program to surface Plug Power in AI-driven buyer search results - capturing technical intent before it ever reaches a traditional SERP. Directly relevant as engineering buyers increasingly research vendors via AI assistants.
- **Pixis B2B SaaS multi-client portfolio:** Managed an 8-client paid portfolio with per-client monthly budgets of **\$15K-\$90K**. Delivered **3x ROAS lift** for a D2C partner via holdout incrementality testing; weekly QBRs at the CFO level.
- **16x ROAS D2C at GenY Medium** via Google Merchant and Meta catalog rebuild. Funnel optimization and price-point testing lifted a B2B partner **+36% conversion** and **+25% revenue**.
- **Analytics depth: SQL, GA4, Power BI, Adobe Analytics,** GTM, HubSpot, Salesforce - the full reporting stack a Performance Marketing Manager owns. MS Marketing Analytics from **Simon Business School (U. of Rochester)**.

What excites me about Sonatype specifically: the technical depth of the buyer, the relevance of paid against an audience that researches deeply before it converts, and the opportunity to bring AEO/GEO thinking to a category where AI-assisted buyer research is already standard practice. Happy to walk through the Plug Power and Pixis playbooks in detail.
