

Lifecycle is a **product surface**, not a comms channel. **I have built both sides.**

Klaviyo + Shopify D2C flows lifted email-attributed revenue 2x.
SwipeHire activation lifecycle solo on Python + OpenAI. Plug Power
MarTech rebuild.

EMAIL REVENUE/SEND

GenY D2C lifecycle on Klaviyo + Shopify

+25%

ACTIVATION LIFT

SwipeHire onboarding + matching A/B tests

+22%

CSAT FROM INTERVIEWS

Sensata: 30+ research interviews drove lifecycle design

Why Stepful's lifecycle is the work I want

Stepful's lifecycle drives student behavior, motivation, progression, and outcomes - across email, SMS, and in-app. That is a product experience role, which is the kind of lifecycle work I have already done.

MULTI-CHANNEL LIFECYCLE

Email + SMS + In-App

Klaviyo + Shopify (GenY), HubSpot + Salesforce (Plug Power), Amplitude + GA4 (SwipeHire) - I have shipped across all three surfaces.

BEHAVIOR-FIRST DESIGN

Research-Driven

30+ Sensata interviews drove product roadmap. GenY win/loss interviews drove +25% customer acquisition rate.

A/B TEST VELOCITY

8+ per quarter

SwipeHire: 8+ A/B tests on onboarding and matching flows. Pixis: holdout incrementality testing validated 3x ROAS.

STEPFUL LIFECYCLE JD NEED	DIRECT EVIDENCE
Architect email, SMS, in-app journeys	GenY: Klaviyo + Shopify cart + post-purchase + re-engagement flows. SwipeHire: in-app activation flows + onboarding A/B tests.
Drive student/customer behavior	Sensata: 30+ interviews drove product roadmap; +22% CSAT, +18% feature adoption. GenY win/loss insights drove +25% CAC.
Architect communication journeys	Plug Power: full lifecycle architecture on HubSpot + Salesforce + Adobe + GA4 + GTM. Persona-tied nurture sequences.
Data-driven, experimentation	SwipeHire: 8+ A/B tests, +25% activation. Pixis: holdout incrementality. MS Marketing Analytics from Simon.
Cross-functional with Growth, Product, CS	Sensata: weekly cadence with Product, Sales, Eng. Pixis: 8-person team across creative, account, platform.

The lifecycle deep dive

Lifecycle is "what got the customer stuck and what unsticks them." Stepful's stuck-points are healthcare students dropping off; mine were D2C buyers and B2B leads. Same shape.

What I have shipped on lifecycle

- **GenY D2C consumer brand:** Klaviyo + Shopify cart abandonment, post-purchase, re-engagement, win-back. 2x lift email-attributed revenue per send. Coupled with paid acquisition to lift LTV-per-cohort across seasonal SKU drops.
- **Plug Power B2B:** Full architecture rebuild on HubSpot + Salesforce + Adobe + GA4 + GTM. Persona-tied nurture sequences. Lifted MQL to SQL conversion across priority product lines.
- **SwipeHire (founded solo):** Activation lifecycle on Python + OpenAI + React. 8+ A/B tests on onboarding and matching flows, +25% activation. Designed the "what unsticks them" moments by reading the data.
- **Sensata research:** 30+ structured customer interviews; insights drove roadmap and lifecycle program design.

"I think about lifecycle as product UX. The email is the surface. The behavior change is the goal."

How I would ramp at Stepful

- **Week 1-2:** Audit current lifecycle flows by stage (enrolled, progressing, stuck, near-complete, post-grad). Pull retention curves and dropout cohorts. Sit with Student Success on the 3 highest-friction moments.
- **Week 3-4:** Ship 2 behavior-triggered nudges for the top dropout moments. Stand up A/B test framework. Map persona segments tighter.
- **Month 2:** Build cohort dashboards tying lifecycle touches to completion + placement outcomes. Document the "stuck-point library" so program design becomes systematic.
- **Month 3:** Standing weekly rhythm with Product + Student Success. Own the completion rate KPI. Hand off playbook for next hire.

Product UX mindset

Multi-channel

Behavior-driven

Data-first

My 30 / 60 / 90 at Stepful

NYC office or US-remote. Calibrated to a 100-person growth-stage healthcare-ed company.

30

Days 1-30: Lifecycle flow audit by stage. Cohort dropout analysis. Sit with Student Success on top 3 friction moments. Map current channels (email, SMS, in-app, course feed).

60

Days 31-60: Ship 2 behavior-triggered nudges for top dropout moments. Stand up A/B test framework. Build first-version cohort dashboards tying lifecycle touches to completion outcomes.

90

Days 61-90: Own the completion rate KPI. Standing weekly rhythm with Product + Student Success. Hand off documented "stuck-point library" playbook. Begin lifecycle design for post-completion placement.

The AI-builder angle

Stepful uses **AI-supported instruction**. Lifecycle should use AI for personalization too. Founded **SwipeHire** on Python + OpenAI + React (app.swipehire.io); I can wire AI agents into Stepful's lifecycle for personalized nudges, transcript synthesis, and stuck-point prediction.

Plus 4 Anthropic Claude certifications.
