Hiring Team, Suite Studios

The JD's headline ask - "establish AI as an operational foundation across the marketing function" - is the rarest line I've read on a Growth Marketing JD this year. Most growth marketers have used AI tools. Few have actually shipped AI products solo or trained marketers to use them. I've done both, and the convergence is what made me write before applying.

On shipped AI products, two of them. SwipeHire is an AI matching product I built solo on Python + OpenAI API + React: LLM-scored matching on top of deterministic skill overlap, auto-tailored CV generation on apply, GA4 + GTM + Amplitude instrumented day one. 50 users, 8 A/B tests on activation, +25% activation lift V1 to V2, weekly cohort retention reviewed. NSE Paper-Trading Bot is a second production AI product on Python + Claude API as an agentic reasoning layer over rule-based technical scoring, with an interactive dashboard for paper-trade validation. Same architecture pattern - deterministic input + LLM reasoning + measured user outcome on a tight feedback loop. That pattern is what any "repeatable AI-driven workflow for marketing operations" actually looks like in production.

On operationalizing AI inside a marketing function, Pixis is the proof. I trained eight enterprise marketers on AI bidding and creative tools as part of weekly client CFO QBRs. Structured the curriculum, sequenced what to teach, measured what stuck. The translation work - AI methodology to procurement-ready outcome - is exactly the work this JD describes when it says "AI as operational foundation across the marketing function."

On the content + launches + website mandate, Sensata is the analog. I ran a customer-story pipeline (30+ structured interviews) that fed a positioning rewrite and a sales enablement library shipped to 50+ reps, lifting win rate 30%. Plus GTM launch coordination across NA + EU for new product lines (+35% qualified leads, \$2M+ first-year pipeline). At Plug Power, I owned the AEO + GEO program (schema, content-cluster mapping, FAQ pages structured for ChatGPT/Claude/Perplexity citation), the HubSpot lifecycle architecture, and the closed-loop attribution rebuild from zero.

Four Anthropic Claude certifications (Claude 101, Code 101, Cowork, Building with the Claude API) and Cursor + Claude as my daily workflow round out the AI fluency baseline.

Attaching my resume and a 6-slide pitch deck mapping these proofs to the JD line-by-line, plus three specific AI-workflow templates I'd ship in the first thirty days. Full portfolio is at adhi-growth-ai.vercel.app/ref/suite-studios.

Remote works, Boston-based. Looking forward to a conversation.
