

PITCH DECK | HEAD OF GROWTH AND CONTENT | SYNTHETICFI

Disrupting a \$1T legacy-bank industry lives or dies on the content engine.

Multi-channel TOFU + content + closed-loop attribution for the RIA channel.

Pixis - 8-client B2B SaaS portfolio at \$1.4M aggregate book

3x ROAS via holdout-incrementality on a D2C beauty client

Plug Power - closed-loop attribution from zero (-25% CPA, +20% conv.)

Sensata - cross-border GTM + 50-rep enablement (+35% leads)

4 Anthropic Claude Certifications + 2 production AI products solo

Each criterion on the left **has a working proof on the right.**

Six lines from the JD. Six things already shipped. Substance, not slogan.

What the JD asks for

"3+ yr building + scaling top-of-funnel growth at a B2B / B2B2C startup."

"Design and execute multi-channel engines across email, direct mail, phone, paid, social, conferences, podcasts, SEO + GEO."

"Produce high-impact content across the full funnel - articles, visuals, videos, websites."

"Build systems, processes, and feedback loops with Sales and CX to improve lead quality."

"Data-driven and highly iterative. Strong content instincts to explain complex ideas."

"Interest in financial advisors / RIAs / financial fundamentals incl. derivatives."

What I have actually shipped

Pixis 8-client B2B SaaS + D2C portfolio at \$1.4M aggregate annual book, per-client monthly \$15K-\$90K across Meta + LinkedIn + Google + Criteo + Amazon + programmatic. Plus Plug Power Meta + LinkedIn ABM + Adobe programmatic.

Plug Power multi-channel paid + retargeting built from zero on Salesforce + Adobe + GA4 + GTM (Meta, LinkedIn ABM, Google, Adobe programmatic). Plus Sensata cross-border GTM across 3 regions with content + sales enablement.

Sensata sales enablement (battlecards + case studies + decks) for 50+ reps - 30% lift in win rates. Plus Plug Power landing pages + ad creative + SwipeHire landing CRO (8 A/B tests, +25% activation).

Plug Power closed-loop attribution from zero: UTM spec, GTM containers, Salesforce attribution, Adobe AAM behavioral segments, lead-routing rules + SLA documentation feeding BDR/AE alerting. -25% CPA, +20% conversion.

Pixis holdout-incrementality slice on a D2C beauty client. Exposed two over-credited channels. Reallocated spend on true lift. **3x ROAS the next month.** Plus 30+ Sensata customer interviews driving CRO + content themes.

D2C beauty client at Pixis: 3x ROAS via holdout incrementality.

Blended ROAS looked fine. A holdout slice showed two channels were getting credit they had not earned. Cut the weak spend, doubled down on what was actually driving lift, brand cleared 3x ROAS the next month. On the RIA channel where reengagement always over-attributes, this is the muscle that protects AUM-retention spend.

WHY THIS MATTERS FOR SYNTHETICFI

On the RIA channel, AUM-retention spend is the channel most likely to get over-credited - the partner would have stayed anyway. Holdout incrementality is the only honest read on true lift.

The discipline that drove the 3x ROAS - cut weak spend, double down on what works - is the same muscle that protects spend when blended numbers look fine but the engine is leaking under the hood.

Plug Power + Sensata: the systems and the content that scale with sales.

The JD asks for systems + processes + feedback loops with Sales and CX, plus high-impact content for the partner-channel audience. I have rebuilt this exact stack and shipped this exact content cadence in two different B2B verticals.

CHANNELS (PLUG POWER)

Meta + LinkedIn ABM + Google Ads + Adobe-Driven Programmatic + Retargeting Funnels

A/B tested keywords, audiences, creative with sample-size + significance gates pre-committed

CONTENT ENGINE (SENSATA)

Sales enablement for 50+ reps - battlecards + case studies + decks + channel-partner microsites

30+ customer interviews driving CRO + content themes | 15% lift on priority launches | 30% lift in win rates

CLOSED-LOOP ATTRIBUTION

UTM spec written from zero + GTM containers rebuilt + GA4 events + Adobe Analytics + Adobe AAM

Closed-loop attribution traced end-to-end from ad click through MQL through Sales-Qualified Lead

SALES + CX HANDOFF

Salesforce campaign attribution + lead-routing rules + SLA documentation feeding BDR/AE alerting

Outcomes: -25% CPA, +20% conversion, +35% qualified leads, \$2M+ pipeline

TRANSLATION TO SYNTHETICFI

Swap "title + seniority + industry" for "RIA AUM tier + book composition + adviser tenure". Swap "Sales-Qualified Lead" for "first box-spread issuance". The closed-loop tracking discipline and content production cadence are the same.

Box spreads are exactly the kind of complex idea that needs a content engine: explainer articles, comparison-vs-bank visuals, case-study videos, RIA-facing microsites. Same translation muscle that worked at Sensata for industrial buyers.

Three experiments I would run in the first thirty days on the RIA channel.

Concrete and scoped. Each ships inside a month and produces a measurable AUM-retention outcome - not a CPL one.

EXPERIMENT 1 - RIA CHANNEL HOLDOUT

Matched holdout on the largest RIA reengagement audience

Pick the biggest RIA-reengagement audience currently active. Carve a matched holdout cell. Measure incremental AUM-retention + box-spread-issuance lift over 3 weeks against the exposed cell. Cut over-credited spend, reallocate to true lift.

Why first. On a partner-channel product, reengagement spend always over-attributes. This is the Pixis 3x ROAS muscle applied to the RIA channel - protects AUM-retention spend before it scales.

EXPERIMENT 2 - BOX-SPREAD CONTENT ENGINE

Three content assets that scale the explanation of box spreads

(a) Long-form RIA-partner playbook on box spreads vs bank lines (3,000 words + visuals + comparison tables); (b) 4-minute explainer video on box-spread mechanics for the RIA-facing microsite; (c) cohort-specific landing pages for top 3 RIA segments with case studies + AUM-retention proof.

Why first. Same translation muscle that turned Sensata's technical sensor features into 15% conversion lift and 50-rep sales enablement that drove 30% win-rate lift. Box spreads need the same explainer cadence.

EXPERIMENT 3 - SALES + CX FEEDBACK LOOP

Closed-loop attribution + RIA-cohort dashboard in week 4

Build UTM spec + GTM containers + Salesforce attribution + RIA-cohort segments mirroring the Plug Power rebuild. Ship a 1-page weekly dashboard tracking pipeline by RIA AUM tier + acquisition source + content-asset attribution. The artifact Sales + CX opens every Monday.

Why first. Same shape as the \$627M Bleeders + Leakers Power BI dashboard at Sensata (1,200 opportunities, 3 regions, 4 product families) - executive-facing artifact built for decision-making, not for show.

What I would want from **the first fifteen minutes.**

What I would want to understand: which RIA cohort is currently leaking hardest on AUM retention; how the team is currently splitting between RIA-channel acquisition and existing-partner expansion; and where the content engine is most blocked today (subject-matter access, production velocity, or distribution).

What I would bring: a draft RIA-cohort holdout design scoped to one reengagement audience, three scoped content assets (box-spread playbook + explainer video + RIA-cohort landing pages), and a one-pager on how I would structure the first 90 days on the RIA channel.

San Francisco works. Fully remote works. Flexible on the hybrid cadence.

15 min with the SyntheticFi team

or written async if that is easier on your week
