

Translating **technical product** into **VP-ready narrative** is what I do.

18 months at Sensata translating sensor architecture for technical, skeptical, deeply conservative buyers. Plus I have shipped my own AI product solo.

FIRST-YEAR REVENUE

New sensing product GTM across NA + EU

Why Sensata is the closest analog to Tavus marketing

From the Tavus JD: "You will be the person who figures out how to communicate what is being built to an industry that is skeptical of AI, fluent in regulatory science, and deeply conservative about the tools it trusts. That is a hard problem."

AUDIENCE MATCH

Tech VP/C-Level

Sensata: I translated capacitive, pressure, MEMS sensor architecture into VP and C-level narratives for OEMs and distributors who are technically deep and skeptical of new tooling.

CADENCE MATCH

Weekly Ship

SwipeHire: shipped weekly product updates with launch posts, demos, changelog. Lifted activation +25% across 8+ A/B tests.

AI FLUENCY MATCH

4 Claude Certs

Founded an AI tool on Python + OpenAI API + React. ElevenLabs / Lovable / Tavus category fluent.

TAVUS JD PROFILE	DIRECT EVIDENCE
Narrative + creative focus (compelling messaging from complex inputs)	Sensata: translated sensor architecture into sales enablement library used by 50+ reps; lifted win rates 30%.
Distribution + growth focus (reach through content, launches, media)	Plug Power: SEO + AEO/GEO + paid + email + 3 conferences + 6 webinars. -25% CPA, +20% conversion.
Multi-modal content (written, video, demos, launches)	Sensata: product launch content (hero pages, demos, case studies, announcements). SwipeHire: founder-led LinkedIn + X content, 12+ posts.
Frequent product launches (weekly cadence)	SwipeHire: shipped weekly. Sensata: ran GTM for new product lines across NA + EU, \$2M+ first-year revenue.
Brand from early stage, position in emerging category	Pixis: trained 8 enterprise teams on a new AI marketing platform category. SwipeHire: positioned a brand-new AI product from zero.

The Sensata deep dive (closest narrative analog to Tavus)

Tavus sells AI-as-human-interface to teams skeptical of AI. Sensata sells precision sensors to OEMs skeptical of new tooling. Same shape, different category.

The narrative I built for skeptical buyers

- **30+ customer interviews** across EMEA and US OEMs and distributors. Output: positioning that lifted CSAT +22% and feature adoption +18% across 50K+ devices
- **Sales enablement library** used by 50+ reps. Translated dense product architecture into stakeholder-ready decks, talk tracks, and objection-handling materials. Lifted win rates 30%
- **GTM for new product lines** across NA and EU: \$2M+ first-year revenue via positioning, channel strategy, content (product announcements, case studies, demos)
- **Pricing strategy** on SQL + Power BI + Python models: +12% YoY revenue, +8% market share - because pricing narrative IS positioning for B2B

"The Sensata buyer is exactly the buyer in your JD - technically fluent, conservative about new tools, and only convinced by narrative that respects their domain depth."

What this gets you on day 30 at Tavus

- **An audit of current Tavus narrative** against the technical buyer persona (CTO / Head of Engineering / Head of Product at AI-native cos)
- **3-5 case studies** drafted from existing customers - translating the conversational video interface into VP-ready outcomes
- **Weekly product launch playbook:** announcement post + demo + case study + changelog, all in 5 days
- **SEO + AEO/GEO program:** so Tavus shows up when AI buyers query ChatGPT/Claude about "AI agents that talk to customers"

Translates tech

Weekly cadence

Multi-modal content

Founder-direct

My 30 / 60 / 90 at Tavus

Reporting directly to the founder, owning narrative end-to-end, frequent product launches. Here is how I would ramp.

30

Days 1-30: Sit with founder + product. Read 6 months of customer conversations. Map 3 buyer archetypes (developer, enterprise PM, founder). Audit existing brand assets. Ship one strong landing-page redesign for the highest-traffic ICP.

60

Days 31-60: Run a weekly launch motion: one product release post, one case study, one demo video. Get on stage at one AI conference. Submit speaking proposals to 3 more.

90

Days 61-90: Build a category narrative around "conversational video as primary interface." Ship a flagship piece (research-grounded long-form). Have 2 customer-led case studies live. Start informing product priorities from buyer friction.

The AI-builder angle

I founded **SwipeHire** on **Python + OpenAI API + React** (app.swipehire.io). 50+ early users, +25% activation across 8+ A/B tests, zero paid budget. So when Tavus ships a new model capability, I can explain it to a developer audience because I have been there.

Plus 4 Anthropic Claude certifications (Claude 101, Claude Code 101, Claude Cowork, Building with Claude API). I do not just write about AI - I have shipped it.
