

PITCH DECK | GROWTH MARKETING MANAGER, TRADE COFFEE

DTC paid + AEO. Both shipped, on the same resume.

The rare convergence the JD asks for.

\$1.4M aggregate book across 6 paid channels at Pixis (D2C)

3x ROAS attribution restructure for a beauty brand

AEO + GEO program shipped at Plug Power

16x ROAS on Shopify + Meta catalog at GenY

4 Anthropic Claude Certifications

Adhithya Rokhith Bhaskar

Two stacks, one resume. Almost no one has both.

The JD asks for end-to-end DTC paid-media ownership across Meta + Google + YouTube + TikTok AND active monitoring of generative-AI search visibility + AEO trends. Most growth marketers have one. Below: where I have each, and what I shipped.

CAPABILITY	Trade Coffee JD asks for	What I've shipped
DTC PAID	Meta + Google + YouTube + TikTok across a consumer-facing subscription brand. CTR + CAC + ROAS focus.	Pixis \$1.4M aggregate book across 6 paid channels (Google + Meta + LinkedIn + Criteo + Amazon + programmatic) on 8-client D2C consumer portfolio (beauty + fashion + e-commerce).
ATTRIBUTION	Convert performance data into actionable insights; maintain tracking accuracy.	Holdout-incrementality restructure for a beauty brand at Pixis -> 3x ROAS in one month. Closed-loop attribution rebuild at Plug Power on Salesforce + Adobe + GA4 + GTM.
A/B TESTING	Build and lead structured A/B testing roadmaps for CTR / CAC / ROAS improvements.	SwipeHire 8 A/B tests with sample-size + significance gates; Pixis cross-channel A/B + holdout incrementality documented in client-facing reports.
SEO + AEO	Track AEO + SEO trends; optimize visibility on generative-AI platforms; technical audits.	Plug Power AEO + GEO program: schema, content clusters, FAQ pages structured for ChatGPT + Claude + Perplexity citation. Plus a 2-page enterprise AI-Search audit teardown I authored.
SHOPIFY + GA4	Proficiency in GA4, Looker, Shopify, Excel/Sheets.	GenY 16x ROAS rebuilt on Shopify + Google Merchant Center + Meta catalog; GA4 + GTM across every role; Power BI + Tableau (Looker-adjacent).

Pixis beauty brand: attribution restructure, 3x ROAS.

Blended ROAS looked fine. A holdout-incrementality slice showed two channels were getting credit they hadn't earned. Reallocated spend on true lift; the brand cleared 3x ROAS the next month. Exactly the "data-into-decisions" muscle Trade's CTR/CAC/ROAS roadmap will need every week.

BEFORE: Last-click credit hides the rot

Display Programmatic Credited 28% of conv. True lift: 6% <i>view-through inflation</i>	Affiliate Credited 19% of conv. True lift: 4% <i>coupon-pickoff</i>	Paid Search Credited 22% of conv. True lift: 31% <i>non-branded compounding</i>	Paid Social Credited 18% True lift: 38% <i>Meta + TikTok prospecting</i>
---	--	--	---

AFTER: Reallocation on holdout-validated lift

Display Programmatic Spend cut 60% Retargeting-only retained \$ freed for Search/Social	Affiliate Spend cut 45% Coupon cap installed CAC discipline restored	Paid Search Spend up 35% Non-branded expansion Marginal ROAS held	Paid Social Spend up 50% Weekly creative cadence Prospecting compounded
--	---	--	--

3x ROAS

in one month, validated by holdout incrementality

WHY THIS MATTERS FOR TRADE

Trade's subscription DTC stack has the same shape: a long-tail of channels each claiming credit. Same diagnostic muscle - **holdout incrementality, true-lift reallocation** - applies to roaster-pairing flows, free-trial conversion, and reactivation campaigns.

The 3x ROAS win on the beauty brand wasn't a creative breakthrough. It was reading the numbers honestly and acting on them.

Plug Power AEO/GEO: FAQ + schema + content clusters built for AI citation.

The JD calls out "monitor generative AI platforms" and "track AEO trends" as ongoing responsibilities. Most candidates can describe what AEO is. Here is the structure of the program I shipped at Plug Power, before it was the buzzword.

AUTHORED ARTIFACT

On top of the program work, I wrote a 2-page enterprise AI-Search audit teardown for an external partner (KKR) that compared their brand visibility against four major competitors across high-intent queries on Google AI Overviews and Perplexity.

Same teardown shape would apply directly to Trade vs Atlas Coffee Club, Mistobox, Driftaway, Bean Box on queries like "best coffee subscription" or "personalized coffee delivery."

Three things I'd ship in the first thirty days at Trade.

Concrete and scoped, not aspirational. Each ties to a specific JD responsibility and is sized to ship inside a month.

SHIP 1 - AEO

Trade-vs-competitors AI-Search teardown

Score Trade's citation rate vs Atlas Coffee Club + Mistobox + Driftaway + Bean Box across 30 high-intent queries on ChatGPT, Claude, Perplexity, Google AI Overviews. Identify the FAQ + schema gaps where Trade is invisible. Output: a prioritized 4-week content-cluster sprint.

Why first. The JD names "monitor generative AI platforms" as an ongoing job. The audit becomes the baseline + the first month's roadmap in one artifact.

SHIP 2 - PAID

TikTok + YouTube creative-test framework

JD names YouTube + TikTok as emerging channels. Stand up a weekly creative-test cadence on both: hook variants, length variants, taste-profile-driven targeting. Sample-size + significance gates defined up front; outcomes logged in a shared decision log for next-sprint allocation.

Why first. Trade is well-known on Meta + Google. The CAC compression unlock is on the emerging channels - the JD says so directly. A structured cadence beats one-off creative bursts.

SHIP 3 - LIFECYCLE

"First 30 days" retention cohort + reactivation

Subscription DTC lives or dies on month-2 retention. Build a cohort-retention dashboard split by acquisition channel + first-roaster match score. Identify the drop-off step, run a lifecycle reactivation sequence A/B'd on subject line + roaster recommendation logic.

Why first. Paid acquisition compounds only if month-2 retention holds. The metric muscle from SwipeHire's cohort retention work transfers directly to subscription DTC.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: which paid channel Trade is currently most under-measured on; how the team is currently splitting the bet between paid scaling and AEO/SEO compounding; and where the team would put their thumbs on the scale for subscription reactivation versus new-acquisition growth.

What I'd bring: a one-pager on how I'd structure the first 90 days, a draft Trade-vs-competitors AI-Search audit scoped to a handful of queries, and an honest take on which of the three week-one ships would compound fastest given Trade's current stack.

NYC works; open to relocating from Boston. Looking forward to it.

15 min with the Trade Coffee team

or written async if that's easier on your week
