

AI MARKETING STRATEGIST PITCH DECK

I have already done the Uplane job at **Pixis**.

An AI ad platform, 8 enterprise clients, \$15K-\$90K per-client monthly budgets, and a CFO across the table every Friday.

Prepared for Hiring Team, Uplane · 2026-05-13

Why this is a near 1:1 fit

From the Uplane JD: "Account Manager with people management and marketing skills... own customer relations, advise on digital marketing, execute marketing projects using our technology, together with the team."

AI AD PLATFORM TENURE

~14 mo

CSM at Pixis: cross-channel bid optimization, generative creative, audience modeling deployed to enterprise.

ENTERPRISE CLIENTS OWNED

8

D2C consumer, B2B SaaS, consumer mobile. Per-client monthly budgets \$15K-\$90K. \$1.4M annualized portfolio.

BEST LIFT DELIVERED

3x ROAS

Fashion D2C partner, one month, validated by holdout incrementality testing.

UPLANE JD REQUIREMENT	DIRECT EVIDENCE FROM MY LAST 4 YEARS
Own customer relations	Pixis CSM: 8 enterprise accounts, weekly QBRs with CFOs and growth leads, mid-quarter strategy resets.
Advise customers on digital marketing	Trained 8 enterprise marketing teams on the AI engine. Translated model recommendations into stakeholder-ready calls.
Execute marketing projects with the tech	Ran 3x ROAS rebuild on Pixis: Shopping feed, smart bidding, creative refresh, lookalikes. Cut portfolio churn 50%.
People and project management	Led 8-person team across creative, account, and platform specialists. Coordinated agency-side delivery on tight SLAs.
Fast learner, stress-resistant	Replaced two underperforming channels mid-quarter when KPIs slipped. Mid-flight strategy resets without churn.

The Pixis deep dive (closest analog to Uplane)

Pixis is the platform Uplane is replacing - and I have spent 14 months selling its outputs to clients. I know where these engines win, and I know where they quietly break.

What I deployed

- **Pixis Codex:** reinforcement-learning cross-channel bid optimization
- **Creative AI:** generative variant testing layered on Meta Advantage+ and Google Smart Bidding (tROAS, Max Conversion Value)
- **Audience modeling:** pLTV-weighted budget pacing across paid social, search, programmatic
- **iOS mobile UA:** Appsflyer + Adjust + SKAN post-IDFA attribution for consumer-app clients

Where AI ad engines quietly break (and how I handled it)

- Bid model overfit on small-budget accounts: shifted them to manual bidding + creative-only AI
- Creative gen losing brand voice: locked taxonomy + human review on hero variants
- Attribution drift between engine and platform pixel: rebuilt UTM spec and reconciled in SQL weekly

What it produced

- **3x ROAS in one month** for a fashion D2C partner (validated via holdout incrementality)
- **-50% client churn** across the portfolio
- \$1.4M annualized portfolio managed solo, 8 clients
- 2 channels replaced mid-quarter when KPIs slipped, zero account loss

Why this transfers to Uplane on day 1

- The pitch is the same: AI replaces agency labor across channels
- The buyer is the same: marketing leader who needs the CFO to sign off
- The failure modes are the same: model trust, brand drift, attribution gaps
- I have already lived the 5-day-in-office, fast-moving, agency-replacement ride - just with Pixis on the wrapper

My 30 / 60 / 90 at Uplane

If hired, here is how I would ramp - calibrated to the on-site SF cadence Uplane runs.

30

Days 1-30: Shadow 2 senior account owners on customer calls. Learn Uplane's ad-generation, landing-page, and budget-allocation flows from the inside. Audit current customer dashboards. Map Pixis-era playbooks (channel-replacement, model-trust resets, weekly QBR shape) onto Uplane's stack.

60

Days 31-60: Take primary ownership of 2-3 customers. Document a per-customer "AI confidence dashboard" so CFO-facing reviews stop being a model interpretation exercise. Ship one client case study + one product launch announcement using Uplane's own tech.

90

Days 61-90: Own 5+ customers. Codify a customer-onboarding playbook from my Pixis experience (the bid-model-trust ramp, the brand-voice lockdown for generative creative, the SKAN-era mobile attribution playbook). Hand to the team. Start informing Uplane's product roadmap from client friction.

AI-native fluency, not just AI-aware

Founded **SwipeHire**, an AI tool I built solo on **Python + OpenAI API + React** (app.swipehire.io). 50+ early users, +25% activation across 8+ A/B tests, zero paid budget.

Plus 4 Anthropic Claude certifications (Claude 101, Claude Code 101, Claude Cowork, Building with Claude API). I do not just talk about AI - I have shipped it.

Logistics

Boston-based

Relo to SF, on-site 5 days

\$120-180K base

Available immediately

Two things I would ask in a first call: (1) Your current onboarding curve in days-to-first-result-for-new-customers. (2) Which customer segment churns most and why - that is where I would offer the most leverage from Pixis-era pattern recognition.
