The Stack the JD Asks For Is the Stack I Run

WHOOOP JD

- 4+ yrs analytics supporting marketing/growth in consumer business
- SQL + Snowflake / dbt / modern data stack
- Highly adept at leveraging AI tools for efficiency and quality
- Paid-media performance across search, social, display, affiliate
- Experimentation, attribution, incrementality testing
- Dashboards across channels, geographies, campaigns
- Influence stakeholders through storytelling and data viz
- Collaborate with Data Science on MMM, attribution, forecasts

What I Have Already Built

3x

ROAS, beauty-brand attribution restructure

-25%

CPA, Plug Power cross-channel

\$627M

Power BI dashboard, 1,200 opportunities

4

Anthropic Claude certifications

8

A/B tests, SwipeHire activation flows

\$1.4M

Pixis 8-client media book, weekly QBRs

- SQL + GA4 across Sensata's 50K+ connected devices
- NSE Paper-Trading Bot - production analytics on Claude API
- Closed-loop attribution rebuilt on Salesforce + Adobe + GA4 + GTM

Pixis Beauty Brand: Attribution Restructure, 3x ROAS in One Month

Blended ROAS read fine. A holdout-incrementality slice showed two channels were getting credit they hadn't earned. Spend reallocated based on true lift; outcome cleared 3x ROAS the next month. Exactly the "translate complex data into decisions that inform budget allocation" line in the JD, in a consumer DTC context.

The translation: attribution is not last-click vs first-click. It is figuring out which channels actually move the number when you turn them off. That diagnostic muscle is what a growth marketing analyst at a 600-role-surge consumer DTC needs every week.

Sensata \$627M Executive Power BI: 1,200 Opportunities, 3 Regions, Read By CFO

A 4-page Power BI dashboard analyzing 1,200 pricing opportunities (\$627M target) across 3 regions, 4 product families, and 20 product lines. KPI frameworks (% to target, win rate, average \$/win, pipeline stage distribution) + regional deep-dives let leadership identify \$433M in margin gaps and prioritize recovery by salesperson and product line. Read by the CFO; acted on the same week.

Page 1 - Executive Summary

\$627M target across 1,200 opportunities. % to target by region. Top-5 bleeders (margin erosion) and top-5 leakers (price leakage). Pipeline stage funnel from qualify to commit.

Page 2 - Regional Deep-Dive

NA / EU / APAC scorecards: win rate, average \$/win, pipeline stage distribution, top opportunities by salesperson. Drillable to product-family and product-line.

Page 3 - Product Family x Region Matrix

4 product families x 3 regions x 20 product lines = a single heat-map view of where margin is bleeding fastest. Color-coded against target.

Page 4 - Recovery Action List

Ranked list of recovery actions by \$-impact, assigned to salesperson and product manager. SLA tracking. The page the CFO opens first.

The AI-Native Analyst Stack, In Production

The JD calls out "highly adept at leveraging AI tools to increase efficiency and quality of work." Below: how the four pieces of the stack already ship analytics work.

15 Minutes With The Growth Marketing Hiring Team

What I would want to understand: how the Growth Marketing team currently splits attribution work between in-house dashboards and the Data Science partnership on MMM, which paid channels (Meta, TikTok, Google, affiliate) are getting the most measurement scrutiny right now, and what the year-one shape of this hire looks like alongside the 600-role surge.

What I would bring: a first read on which holdout-incrementality experiment would be cheapest to run on WHOOP's current paid mix, a draft dashboard skeleton for the cross-channel pacing meeting, and an honest take on how to use Claude or Cursor to compress the weekly reporting cycle without sacrificing the rigor a CFO will trust.

Boston-based. No relocation friction. Available this week or next.

15-Minute Hiring Team Call

or written async if easier
