

PITCH DECK | ABM/GROWTH MARKETING MANAGER, YOOBIC

Account-level ABM substance + builder credential.

The two things the JD asks for at IC level.

Plug Power - account-level ABM stack from zero on Adobe AAM + LinkedIn ABM

Pixis - 8-client B2B SaaS portfolio with \$1.4M aggregate book

SwipeHire + NSE Bot - 2 shipped AI products solo

4 Anthropic Claude Certifications

Account-level substance + a builder credential.

Many ABM Manager candidates will have spent three years inside 6sense. Few will have shipped two AI products solo on top of the substance work. The JD asks for both - "test-and-learn builder" is on the must-have-adjacent line, not the nice-to-have.

JD MANDATE	YOOBIC asks for	What I've shipped
ACCOUNT-LEVEL ABM	Design 1:1, 1:few, 1:many ABM programs. ICP segmentation + tiering across firmographic, behavioral, intent data.	Plug Power: built the account-level ABM stack from zero on Adobe Audience Manager + LinkedIn ABM. Behavioral segments, retargeting funnels, audience layers by title + seniority + industry. HubSpot account-level lifecycle stages.
MULTI-TIER ORCHESTRATION	1:1, 1:few, 1:many tiers; align with Sales on account plans, engagement strategy, pipeline targets.	Pixis 8-client B2B SaaS portfolio: each client = tiered ABM target with bespoke ICP, cross-channel orchestration, weekly client CFO QBR on engagement-to-pipeline.
ROUTING + ALERTING	Develop routing logic + alert systems for BDRs and AEs with RevOps.	Plug Power: lead-routing rules + SLA documentation through Salesforce campaign attribution. Closed-loop attribution from ad click to SQL.
BUILDER, TEST-AND-LEARN	Builder, test-and-learn mentality (bonus criterion).	Two shipped AI products solo: SwipeHire on Python + OpenAI API + React (50 users, 8 A/B tests, +25% activation) + NSE Bot on Python + Claude API. 4 Anthropic Claude certs + Cursor + Claude daily.

Built the account-level ABM stack **from zero.**

Adobe Audience Manager + LinkedIn ABM + HubSpot + Salesforce, architected end-to-end. Different vendor mix than YOOBIC's 6sense/Demandbase stack; same operator pattern.

ACCOUNT-LEVEL SIGNALS

Adobe Audience Manager

Account-level behavioral segments | Suppression lists
First-party + 3rd-party traits | Lookalike expansion

LinkedIn ABM

Audience layers: title + seniority + industry + employer
Account-targeted Sponsored Content + Message Ads

ENGAGEMENT + RETARGETING

Multi-channel orchestration with account-level retargeting funnels

Google Ads + Meta + Adobe-driven Programmatic, all keyed to account-level segments. A/B tested keywords, audiences, creative.

Outcome: -25% CPA, +20% conversion. Closed-loop attribution from ad click to SQL.

LIFECYCLE + ROUTING

HubSpot lifecycle (account-level)

Sequences + pipelines + lifecycle stages
Account-level behavioral segmentation + MQL nurture drip

Salesforce routing + SLA

Campaign attribution validated end-to-end
Lead routing rules + alerting fed BDR/AE handoff workflows

*Different tools than YOOBIC's stack (6sense/Demandbase) - same operator pattern.
Account-level signals -> engagement orchestration -> routed alerts -> pipeline conversion.*

THE HONEST FRAMING

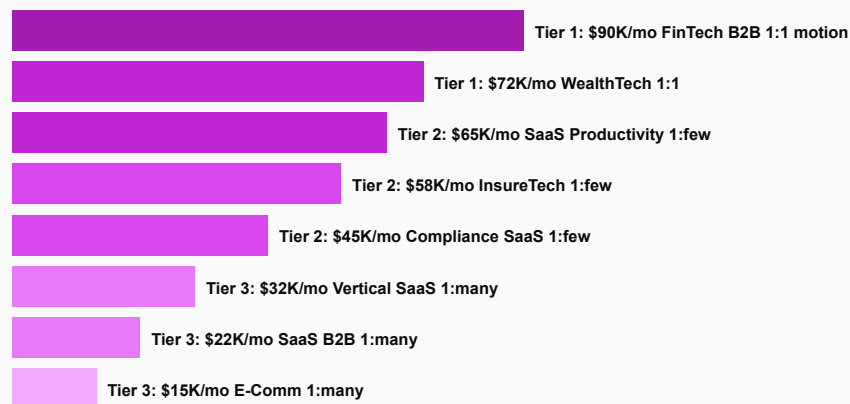

*I haven't worked in 6sense specifically.
The architectural muscle is what
transfers - account-level segments,
intent-trigger workflows, routing logic.*

*If the team values "title-years in 6sense,"
this is a stretch. If the team values
**shipped account-level ABM
substance + a builder credential**, this
is the right operator.*

8 clients. Each treated as a tiered ABM target.

An 8-client B2B SaaS agency book is structurally an 8-tier ABM program. Each client got bespoke ICP definition, cross-channel orchestration, and weekly engagement-to-pipeline review. That's the 1:few + 1:many machinery the JD describes.

8 CLIENTS = 8 TIERED ACCOUNTS

PER-TIER PLAYBOOK

Tier 1 (\$72-90K, 1:1): dedicated creative + custom dashboards + weekly CFO QBR + bespoke channel mix.

Tier 2 (\$45-65K, 1:few): shared creative pods + portfolio dashboards + biweekly review + standardized channel mix.

Tier 3 (\$15-32K, 1:many): templated creative + automated reporting + monthly review + benchmark channel mix.

Holdout-incrementality work on one Tier-2 client drove 3x ROAS the next month.

WHY THIS IS THE MULTI-TIER ABM ANALOG

YOOBIC sells to 300+ global brands. The book naturally splits into tiers. The Pixis playbook - **tiered orchestration, per-tier playbooks, structured engagement review** - is the same machinery, just framed as agency-side client tiers.

Translation to 1:1, 1:few, 1:many tiers at YOOBIC is one renaming away.

\$1.4M

Aggregate book

8

Tiered accounts in parallel

6

Paid channels orchestrated

3x ROAS

Beauty-client lift

Three ABM ramp experiments I'd run in the first sixty days.

Concrete and scoped. Each is sized to ship inside two months and produces a measurable engagement-to-pipeline outcome.

EXPERIMENT 1 - 1:1 PILOT

Top-10 global retail accounts, 1:1 motion

Pick 10 named global retail brands not yet on YOOBIC's customer list. Build bespoke account plans: buying-committee map (Ops + IT + L&D + frontline ops), persona-based messaging, account-level paid + LinkedIn ABM + outbound sequence + custom landing page. Hand the engagement signal to AEs through Salesforce alerts.

Why first. The 1:1 motion is the fastest test of whether the new account-level stack actually produces pipeline. Pixis Tier-1 playbook (\$72-90K clients, 1:1) maps directly.

EXPERIMENT 2 - 1:FEW TIER-2 AUDIT

Top-50 hospitality accounts, 1:few

Cluster 50 hospitality brands by category (QSR, hotels, casual dining, fast-casual). One messaging spine per cluster, shared creative pods, audience layers by title + region. Biweekly engagement review on engagement-to-pipeline conversion.

Why first. 1:few is where most ABM programs leak. Standardized per-tier playbook + structured review (Pixis Tier-2 analog) cuts the leak. Quick wins in 30-45 days.

EXPERIMENT 3 - BUILDER CREDIT

An AI-driven intent-signal triage workflow

Cursor + Claude pipeline that ingests intent + engagement signal data, surfaces the top 5 accounts/week with the strongest buying signal, and drafts a 1-paragraph BDR brief per account (recent triggers, buying-committee map, suggested first message). Reviewer-in-the-loop, not auto-send.

Why first. The builder credit. SwipeHire's instrumentation discipline transfers to intent triage. This is where the JD's "test-and-learn builder" mandate becomes a working tool.

What I'd want from **the first fifteen minutes.**

What I'd want to understand: where the team currently splits between 1:1 and 1:few tier investments; which tier is producing the most pipeline today and which is bleeding the most; whether the team values "title-years in 6sense" or "shipped account-level substance + builder credential" more for this seat.

What I'd bring: a one-pager on how I'd structure the first 90 days, a draft buying-committee map for one of the top-10 global retail accounts on YOOBIC's customer list, and an honest take on the closest closeable tool gap (6sense vs Demandbase vs UserGems) given my Adobe AAM + LinkedIn ABM base.

Remote works. Boston-based for whenever in-person matters.

15 min with the YOOBIC team

or written async if that's easier on your week
