Hiring Team, Factory

Your posting asks for someone who owns quote-to-booking end to end and finds ways to put Factory's own droids to work streamlining it. I run that loop myself every day. PriceKeel, the company I founded, reads a live discount exception inside the deal platform before a deal reaches booking, and I set up and run its CRM and CPQ configuration, forecast and pipeline reviews, and deal approvals. That is not a reference project, it is the actual system I operate.

I have made the harder call on real money too. Leading the Bleeders and Leakers program at Sensata, I reviewed deals for booking readiness and discount exceptions one by one, building commercial terms and AP26 revenue models for multimillion-dollar customer quotes alongside senior executives, and recovered \$700K plus in margin in two quarters. In the same window I repriced the channel so distributor margins moved from 53% to 61%, then documented the new discount governance so Finance could audit it rather than take my word for it. Booking data integrity is not a separate checkbox in that world, it is the same discipline that keeps a deal defensible six months later.

The AI fluency your posting asks for is not theoretical either. At Applied Materials I automate repetitive pricing and forecasting analysis with Claude agents, freeing analyst time for the judgment calls that still need a person, which is exactly the instinct I would bring to finding where Factory droids can take the busywork out of your own quote-to-booking process rather than just bolting AI on top of it.

The CPQ ownership behind all of this came from building and administering systems from the ground up at PriceKeel and configuring them at Sensata, the judgment that sits underneath any specific CPQ platform's interface. I would bring that same ownership to your deal desk from week one. Proof trail at adhi-pricing-ai.vercel.app/ref/factory.
