

PITCH DECK | AIRWALLEX PRODUCT MARKETING MANAGER, SPEND

Spend products do not get bought on features. They get bought the moment Finance trusts the number a rep just quoted. I have spent two years building exactly that trust, on both sides of the table.

A positioning and enablement track record built for upmarket deal cycles, paired with a pricing background that knows why a finance buyer hesitates before they say so out loud.

Sensata GTM - owned positioning, pricing, channel and launch zero-to-one, \$2M+ first-year revenue

50+ reps / +30% - enablement decks and case studies that lifted win rates upmarket

PriceKeel - founder and CEO, built the explainable discount guardrail and audit trail Finance can check

+12% YoY revenue - price-realignment decisions as Pricing Lead, benchmarked across 10+ players

AI agents on Claude - in production use today, Applied Materials

Consistent positioning for the Spend suite is not a messaging exercise. It is **a trust problem wearing a marketing brief.**

What that actually requires

Bridging customer, commercial and product teams so the same value story survives the trip from spec sheet, to sales deck, to a finance buyer's inbox, without drifting three different ways.

Winning upmarket deal cycles against single-purpose spend tools with a simpler pitch, which means enablement assets have to shorten the deal cycle, not just describe the product one more time.

Grounding every positioning call in real qualitative and quantitative signal, because global and regional teams will not adopt a message on faith alone.

What I have already built at that trust layer

Owned **GTM end to end** for a new Sensata product line, turning spec-sheet features into customer value language that lifted conversion 15%, then built the enablement decks and case studies that lifted win rates 30% across 50+ reps.

Founded **PriceKeel** to solve the finance-trust half directly: an explainable discount guardrail and the audit trail Finance can check, so a fast pricing decision does not cost its own verification.

Ran **30+ structured customer interviews** before writing a line of messaging, then checked that read against SQL and GA4 usage data across 50K+ devices before it shipped.

The through-line: I have already built the sales-enablement half of this problem and the finance-trust half, just on two different products.

What the Spend PMM posting is asking for, and where the proof already sits.

What the role covers

- "Deliver consistency and simplicity in our product positioning in the market... with a focus on our Spend suite of products."*
- "Develop compelling and high-impact enablement assets that equip upmarket sales teams to accelerate deal cycles and win key accounts."*
- "Leverage qualitative and quantitative insights across channels, customers and product to influence and enhance the product roadmap."*

My proof

- Sensata GTM, zero-to-one:** owned positioning, pricing, channel and launch for a brand-new product line end to end, driving \$2M+ in first-year revenue.
- Sales enablement:** decks and case studies for 50+ reps that lifted win rates 30%, the exact "shorten the deal cycle" job the Spend suite needs upmarket.
- Insight into roadmap:** 30+ customer interviews plus SQL and GA4 usage data across 50K+ devices, feeding the roadmap and lifting adoption 18%.
- PriceKeel and Pricing Lead:** the finance-trust and deal-desk side of positioning a money product, not just the marketing side of it.

Sensata: a blank product line to a \$2M+ launch, grounded in the people who had to buy it.

Built as the GTM owner for a brand-new sensing line, positioning, pricing, channel and launch, not handed a positioning brief to execute after the fact.

30+

Structured Customer Interviews

OEM and distributor buyers, heard from before a single line of messaging got written.

50+ / 30%

Reps Enabled / Win-Rate Lift

Decks and case studies that gave upmarket teams one consistent pitch instead of five different ones.

\$2M+ / 15%

First-Year Revenue / Conversion Lift

The result of turning spec-sheet features into customer value language, not the other way around.

The same instinct runs through PriceKeel: a positioning claim about a finance decision only holds up once the audit trail behind it survives a second look from Finance.

What the first month on the Spend positioning and enablement seat would look like.

WEEK 1 Sit with the buyer, not the brief Talk to Spend customers, upmarket sales and product to find exactly where the current pitch breaks down, the same move that grounded the Sensata launch before any deck existed. ----- Why first: a positioning refresh built on assumptions instead of real deal-cycle friction is the fastest way to miss the mark.	WEEK 2-3 Rebuild the asset reps actually reach for Ship the enablement deck or case study most likely to shorten the deal cycle fastest, instrumented the way the Sensata launch was, so it is measured before it scales. ----- Why now: a library of unused collateral is a worse outcome than one asset reps actually pull up mid-call.	WEEK 4 Turn the first proof point into the global update Use what closed and what reps actually used to refresh positioning across regions, the same handoff that took Sensata's launch from one line to a repeatable playbook. ----- Why this fast: a positioning update only earns global rollout by showing it moved a real deal first.

CLOSE

Spend needs positioning a finance buyer trusts and enablement an upmarket rep will actually use. I have already built both halves.

The core proof is Sensata and PriceKeel together: a **\$2M+ zero-to-one GTM launch** with enablement that lifted win rates 30% across 50+ reps, and an **explainable pricing guardrail and audit trail** I designed myself for the finance-trust side of a money decision.

What is harder to find is someone who has shipped the upmarket enablement half of this job **and** understands why a finance buyer hesitates on the other side of the table. That combination is what a Spend positioning hire needs most.
