Hiring Team, Airwallex

The line in your posting that stuck with me is the one about bridging customers, commercial and product teams so positioning stays consistent and simple. I have spent the last two years on exactly that seam. At Sensata I owned the GTM for a new sensing product line end to end, positioning, pricing, channel and launch, and turned technical specs into customer value language that lifted conversion 15% on our priority launches. The same enablement decks and case studies I built for 50 plus reps gave upmarket sales teams one consistent pitch instead of five different ones, and win rates went up 30% because of it.

Spend products live or die on whether Finance and the deal desk trust the number a rep is quoting, which is the same trust problem I have been solving from the other side. As Pricing Lead at Sensata I drove price-realignment decisions off competitive benchmarking across 10+ players for a business north of \$100M, and I am now founder of PriceKeel, building the guardrail engine and audit trail that lets a company explain a discount to Finance instead of just hoping it holds up. Positioning a spend product is a version of that same job: make the value obvious enough that a buyer's finance team signs off fast.

I also do not wait for the roadmap to hand me insight. I ran 30+ structured interviews with OEM and distributor engineers before writing a single line of messaging, and built the SQL and GA4 frameworks that told me which segments were actually adopting versus which ones just said yes in the interview. At Applied Materials today I automate the repetitive side of that analysis with AI agents built on Claude, so more of my week goes to the customer conversation and less to the spreadsheet.

What I would bring to the Spend team is a positioning muscle that has already been tested against upmarket sales cycles, plus a pricing background that understands why a finance buyer hesitates before they say it out loud. Proof trail at adhi-product-ai.vercel.app/ref/airwallex.
