Hiring Team, Campfire

Your posting wants someone who builds the pilot infrastructure the rest of GTM runs on, not someone who just reports out of it afterward. That is what I run today at PriceKeel: I built the guardrail engine from scratch, reading live discount exceptions inside the deal platform, then set up and now operate the company's own CRM and CPQ, deal-stage definitions, forecast and pipeline reviews, and deal approvals, while running pilots with early customers. The spin-up-to-teardown instinct behind your pilot and sandbox environments is the same muscle.

The instrumentation half of this role is where I spend most of my time already. At Sensata I built the SQL and GA4 tracking that turned usage across 50K+ connected devices into adoption signals, lifting feature adoption 18%, the same who's-touching-what view you want for pilot health. I shipped the FY2026 Bleeders and Leakers Power BI scorecard that ranked 1,200 opportunities against a $627M target with win-rate and stage-conversion reporting by rep, which is the demo-to-close analytics muscle your SC performance tracking needs, and surfaced $433M in margin shortfalls by salesperson and product line so leadership knew exactly where to push.

On the builder side, I automate the recurring parts of market analysis with AI agents on Claude at Applied Materials, and before that built an AI job-matching platform zero-to-one on Python, the OpenAI API and React, writing my own PRD and shipping auto-tailored resumes and eligibility-aware matching to 50+ early users. Enablement is the other constant: I trained and certified 50+ reps every time a Sensata product line shipped something new, lifting win rates 30%, which is close to what training SCs, AEs and SDRs on a product that ships weekly asks for.

If I started on day one, I would instrument pilot usage into one health score per prospect the way I did with those 50K+ devices, then wire that into a demo-to-close view so the team can see which touches actually move good-fit deals forward instead of guessing from a dozen spreadsheets.
