Hiring Team, Protegrity

Your posting asks for a GenAI product manager who can turn conversational assistants and policy advisors into something customers actually trust inside a security product, not just a demo. I have already shipped that shape of feature. SwipeHire is an AI job-matching platform I built zero-to-one on the OpenAI API: I wrote the PRD, scoped the MVP, shipped auto-tailored resumes and visa-aware matching, and validated it with 50+ early users before iterating on what actually drove activation.

The agentic half of the role is also where I spend my current week. As Strategic Marketing III at Applied Materials, I run AI agents built on Claude to automate repetitive analysis, the same human-checked pattern a policy advisor or conversational assistant needs before it ships inside an enterprise product. I pair that with forecasting and market-sizing models across multiple product groups, working daily with Engineering, Sales and Accounts so a feature's rollout and its roadmap stay on the same page.

Before that I owned a real product roadmap end to end at Sensata: a 100+ feature backlog for sensor solutions, run with Engineering in Agile across 3 regions, cutting time-to-market 20%. I ran 30+ customer interviews with OEMs and distributors to find the pain points worth building for, which raised CSAT 22%, and built the KPI frameworks that tracked adoption once features shipped. That is the loop your posting describes: validate with customers, ship, then prove it moved satisfaction and adoption, not just a release note.

Protegrity's bet is that enterprises will only trust GenAI inside their data if the product around it is built with the same rigor as the cryptography underneath it. That is the kind of PM I am: proof over pitch, PRDs that hold up under cross-functional review, and metrics tied to the business outcome rather than the demo. Proof trail at adhi-product-ai.vercel.app/ref/protegrity.
