Hiring Team, Airwallex

At Plug Power I owned the WordPress and Pardot lead flow end to end: closed the loop from a visitor's first search to a marketing-qualified lead, cut cost per lead 50%, and raised organic search visibility 35% by rebuilding the keyword strategy underneath it. That is the same job your Growth squad is describing for the corporate site, just with a bigger surface and a self-serve product motion sitting behind the funnel instead of a sales handoff.

I run experiments the same way whether the product is industrial sensors or a job-matching app. At Sensata I turned raw device telemetry into KPI frameworks in SQL and GA4 across 50,000+ connected devices, reading drop-off signals instead of opinion to reprioritize the backlog, which lifted feature adoption 18%. On SwipeHire I built the GA4/GTM funnel myself, ran 8+ A/B tests and 12+ user interviews, and used what the drop-off data said to lift activation 25%. I would bring that same hypothesis-to-analysis loop to the corporate site: define the test, ship it with Engineering, read the funnel, decide, and move to the next one.

Cross-functional is also how I already work. At Applied Materials I partner with Engineering, Sales and Accounts to size a market with no existing playbook, and I automate the repetitive parts of that analysis with AI agents built on Claude so more time goes to the actual tradeoffs. At Plug Power I tied the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) into one closed-loop report so Sales and Marketing argued about the same numbers, which is the same alignment your posting wants between Growth, GTM, Marketing and RevOps.

What I would bring to the corporate site is a bias for shipping the test before the debate: define the hypothesis, get it live, read what the data says, and repeat. Proof trail at adhi-product-ai.vercel.app/ref/airwallex.
